\*Due to changes in accounting procedures, data for April 1986 and subsequent months are not strictly comparable with those for earlier periods. In particular, unemployment insurance contributions before April 1986 are included in Specified Purpose Accounts.

†Fiscal year totals are from the audited Public Accounts of Canada, while monthly data are from the unaudited "Statement of Financial Operations" published in the Canada Gazette. The sum of the monthly data for a fiscal year is likely to differ from the annual totals taken from the Public Accounts.

à l'assurance-chômage avant avril 1986 figurent sous la rubrique des Comptes à fins déterminées.

†Les données de l'exercice financier sont tirées des comptes publics du Canada, tandis que les données

sanction du Vérificateur général. Il est fort probable que les sommes des données mensuelles d'un même exercice diffèrent des chiffres annuels tirés des comptes publics.

\*Starting in January 1987, data taken from the Survey of Employment, Payroll and Hours are not strictly comparable with those for earlier months because of improvements in sampling methodology. Adjustment factors to calculate growth rates across this statistical break are available from Statistics Canada.

\*Les données extraites de l'Enquête sur l'emploi, la rémunération et les heures de travail ne sont plus, depuis janvier 1987, tout à fait comparables à celles des mois précédents, en raison d'améliorations apportées à la méthode d'échantillonnage. Il est possible de se procurer, auprès de Statistique Canada, les facteurs de correction permettant d'obtenir des taux de croissance comparables pour les séries antérieures et postérieures à janvier 1987.

\*Starting in January 1987, data taken from the Survey of Employment, Payroll and Hours are not strictly comparable with those for earlier months because of improvements in sampling methodology. Adjustment factors to calculate growth rates across this statistical break are available from Statistics Canada.

\*Les données extraites de l'Enquête sur l'emploi, la rémunération et les heures de travail ne sont plus, depuis janvier 1987, tout à fait comparables à celles des mois précédents, en raison d'améliorations apportées à la méthode d'échantillonnage. Il est possible de se procurer, auprès de Statistique Canada, les facteurs de correction permettant d'obtenir des taux de croissance comparables pour les séries antérieures et postérieures à janvier 1987.

# Notes to the tables

## Cansim-Databank identification numbers

Many of the time series published in the Review are available from Statistics Canada in machine-readable form, for use on computers, or in print-outs. Each time series of annual, quarterly, monthly or weekly data on the Cansim system (Canadian Socio-Economic Information Management) has an identification number. A variety of prefixes identify the series maintained by Statistics Canada (e.g. D1432, P484000), while those maintained by the Bank of Canada have a B prefix (e.g. B318), and those maintained by Canada Mortgage and Housing Corporation have a H prefix (e.g. H48). The identification number is given as a reference at the top of each column of data and refers to the series of weekly, monthly or quarterly data in that column. Where the frequency of a series as it is available on Cansim is different from that shown in the table or where a combination of quarterly and monthly data is shown in the table, the frequency of the Cansim series is indicated by a superscript M if monthly or by a superscript Q if quarterly. Current and revised data are entered into Cansim immediately on release.

## Weekly series

The tables in the Review do not cover a full year of weekly data. For all Wednesday series, in the event a holiday falls on a Wednesday, data for the preceding business day will be shown. Figures for weekly series for which the Bank of Canada is the source are available on request to the Department of Monetary and Financial Analysis, Bank of Canada, Ottawa K1A 0G9.

## Notes to the tables

The reference notes to the statistical tables in the Review, which prior to 1981 were included in each monthly issue, are now printed under a separate cover. The separate section of notes will be updated and reprinted as necessary. Additional copies of the explanatory notes may be obtained by writing to the Bank of Canada Review, Public Information Division, Secretary's Department, Bank of Canada, Ottawa K1A 0G9. The latest note supplement is dated January 1989.

This section of the monthly Review will include only revisions to the notes as may be required to keep them current for users of the statistical tables, as well as the reference notes pertaining to tables that are published only occasionally in the Review.

# Notes relatives aux tableaux

## Cansim – Numéros de référence des séries de Databank

Nombre des séries chronologiques publiées dans la Revue peuvent être obtenues de Statistique Canada sous une forme directement exploitable par ordinateur ou sous la forme d'imprimés. Elles font partie intégrante du fichier Cansim<sup>1</sup>, dont chaque série chronologique – annuelle, trimestrielle, mensuelle ou hebdomadaire – est identifiée par un numéro de référence. Les numéros des séries élaborées par Statistique Canada sont précédés de diverses lettres (par exemple : D1432, P484000), ceux des séries de la Banque du Canada, de la lettre «B» (par exemple : B318) et ceux de la Société canadienne d'hypothèques et de logement, de la lettre «H» (par exemple : H48). Dans nos tableaux, le numéro apparaît en tête de la colonne et identifie la série hebdomadaire, mensuelle ou trimestrielle qui figure dans la colonne; lorsque les fréquences de données figurant au fichier Cansim et dans un tableau de la Revue diffèrent ou que le tableau comporte à la fois une série mensuelle et une série trimestrielle, la fréquence de la série Cansim est indiquée par la lettre «M» si la série est mensuelle et par la lettre «Q» si elle est trimestrielle.

<sup>1</sup> Ce sigle est une abréviation de *Canadian Socio-Economic Information Management System* – Système canadien de traitement des données socio-économiques

## Séries hebdomadaires

Dans les tableaux de la Revue, les séries de données hebdomadaires ne couvrent pas une année entière. Lorsque le mercredi est un jour férié, les statistiques du mercredi sont établies à partir des données du jour ouvrable précédent. On pourra obtenir les données provenant de la Banque du Canada en s'adressant au département des Études monétaires et financières, Banque du Canada, Ottawa K1A 0G9.

## Notes relatives aux tableaux

Les notes relatives aux tableaux de la Revue, qui jusqu'à la fin de 1981 étaient reproduites dans chaque livraison, sont désormais imprimées séparément. Elles seront mises à jour et publiées au besoin. Ceux qui désirent recevoir d'autres exemplaires des notes sont priés de s'adresser à la Revue de la Banque du Canada, Section de l'information, Secrétariat, Banque du Canada, Ottawa K1A 0G9. Le plus récent supplément a été produit en janvier 1989.

La présente section de la Revue ne contiendra que les mises à jour essentielles à l'interprétation des statistiques et les notes se rapportent aux tableaux publiés à des fréquences variables dans la Revue.

## A1

As a result of a rebasing of the national accounts, lines 10-15 on page 3 of the Notes should now read:

- 10 Gross domestic product at constant (1986) prices (Table H3)
- 11 Gross domestic product by industry; at constant 1986 prices (Table H5)
- 12 Industrial production; at constant 1986 prices (Table H13)
- 13 Manufacturing production; at constant 1986 prices (Table H5)
- 14 Gross national expenditure implicit price index; 1986=100 (Table H4)
- 15 Consumer price index excluding food; 1986=100 (Table H11)

## D1-D2

Sources: Bank of Canada, Statistics Canada

Data on Table D1 are derived from total trust and mortgage loan company data collected quarterly by Statistics Canada (available in "Financial Institutions," Catalogue No. 61-006) and from a monthly survey by the Bank of Canada of companies that, at the end of September 1989, represented over 80 per cent of total assets in these industries. For months between quarter-ends, financial items on Table D1 are estimated individually from this survey to obtain aggregate data for the industry. As a result, for these months, total assets may not equal total liabilities, as they are the sums of the component series. Where there are foreign currency assets or liabilities these are included in the relevant component series. Data for the mortgage subsidiaries of the chartered banks appearing on Table D2 originate directly from the monthly survey by the Bank of Canada. On 25 January 1988 the Laurentian Group, which included Eaton-Bay Financial Services, restructured its assets and liabilities among three companies: Laurentian Bank, Laurentian Trust and Laurentian Bank of Canada Mortgage Corporation. As a result, total assets and liabilities of trust and mortgage loan companies were reduced by \$207 million, representing the amount of assets and liabilities allocated to the Laurentian Bank from Eaton-Bay Trust.

• *Cash and gross demand and notice deposits* include deposits placed in chartered banks and other financial institutions in Canada and abroad. • *Items in transit* represent the net balance of all items in the course of settlement. • *Term deposits* include swapped deposits at chartered banks and deposits at institutions other than chartered banks. • *Other short-term paper and bankers' acceptances* include notes issued by sales finance companies and provincial and municipal treasury bills and short-term notes. • *Canadian bonds* are bonds, debentures and notes with an original term to maturity of one year or more. • *Personal loans* comprise both secured and unsecured loans. Beginning in December 1989, this series also includes loans to unincorporated businesses and non-profit organizations. • *Other loans* include secured loans placed with investment dealers as well as other collateral and unsecured loans; they also include farm loans.

• *Other assets* comprise other investments in Canada as well as investments in institutions and corporations outside Canada, investments in and claims on parent, subsidiary and affiliated companies, accounts receivable and accrued revenue, fixed assets, real estate and other assets, less accumulated provisions for losses on loans and investments.

• *Daily interest deposits* include only those deposits held by companies surveyed by the Bank of Canada. • *Personal deposits* include deposits by individuals, unincorporated businesses and non-profit institutions. • *Tax-exempt deposits* include RRSPs, RHSPs and other tax-sheltered funds placed in savings and term deposits. • *Promissory notes and debentures* include promissory notes, subordinated notes and debentures issued under trust indenture. • *Other liabilities* consist of debt owing to parent, subsidiary and affiliated companies, accounts payable and accrued liabilities, corporation income taxes payable, deferred income, mortgages payable, deferred income taxes and other liabilities.

## A1

L'année de base retenue dans les comptes nationaux ayant été modifiée, les lignes 10-15 de la page 3 des Notes aux tableaux devraient maintenant se lire comme suit :

- 10 Produit intérieur brut à prix constant (1986) (Tableau H3)
- 11 Produit intérieur brut par branche d'activité à prix constants (1986) (Tableau H5)
- 12 Production industrielle à prix constants (1986) (Tableau H13)
- 13 Production manufacturière à prix constants (1986) (Tableau H5)
- 14 Dépense nationale brute; indice synthétique des prix; 1986=100 (Tableau H4)
- 15 Prix à la consommation, alimentation exclue; 1986=100 (Tableau H11)

## D1 et D2

Source : Banque du Canada et Statistique Canada

Les données qui figurent au Tableau D1 sont tirées de l'ensemble des données des sociétés de fiducie ou de prêt hypothécaire, recueillies tous les trimestres par Statistique Canada (publiées dans *Institutions financières*, catalogue n° 61-006) et d'une enquête mensuelle menée par la Banque du Canada auprès d'un échantillon de sociétés de fiducie ou de prêt hypothécaire qui, à la fin de septembre 1989, détenaient plus de 80 % de l'actif de ce secteur. Pour ce qui est des mois qui ne coïncident pas avec une fin de trimestre, les chiffres des postes financiers figurant au Tableau D1 sont estimés au cas par cas à partir des données de l'enquête mensuelle pour obtenir les données globales du secteur. En conséquence, le total des actifs pour les mois en question peut ne pas être égal au total des éléments du passif correspondant, puisqu'il résulte de l'addition des chiffres de chacun des éléments de la série visée. Les avoirs et engagements en monnaies étrangères sont inclus le cas échéant dans chacune des séries correspondantes. Les données des filiales hypothécaires des banques à charte, qui figurent au Tableau D2, sont tirées directement de l'enquête mensuelle de la Banque du Canada. Le 25 janvier 1988, le groupe financier de la Laurentienne, qui comprenait les Services financiers Eaton-Baie, a réparti ses avoirs et engagements entre trois sociétés : la Banque Laurentienne du Canada, le Trust La Laurentienne du Canada Inc. et la Société d'hypothèque Banque Laurentienne du Canada. Par conséquent, les avoirs et les engagements totaux des sociétés de fiducie ou de prêt hypothécaire ont accusé une baisse de 207 millions de dollars, montant qui représentait la part des avoirs et engagements du Trust Eaton-Baie allouée à la Banque Laurentienne du Canada.

• *L'encaisse, les montants bruts des dépôts à vue et les dépôts à préavis* comprennent les dépôts confiés aux banques à charte et aux autres institutions financières au Canada et à l'étranger. • *Les effets en cours de compensation* représentent le solde net de tous les effets en cours de règlement.

• *Les dépôts à terme* comprennent les dépôts swaps dans les banques à charte et les dépôts dans les institutions autres que les banques à charte. • *Le poste autre papier à court terme et acceptations bancaires* comprend les billets émis par les sociétés de financement, les bons du Trésor émis par les provinces ou les municipalités et les billets à court terme. • *Obligations canadiennes*. Ce poste comprend les obligations, les débentures et les billets dont l'échéance est de un an ou plus. • *Les prêts aux particuliers* comprennent les prêts garantis ou non garantis. Depuis décembre 1989, cette série comprend également les prêts aux entreprises non constituées en sociétés et aux sociétés à but non lucratif. • *Les autres prêts* comprennent les prêts garantis accordés aux courtiers en valeurs mobilières de même que les autres prêts sur nantissement et les prêts non garantis; ils comprennent également les prêts agricoles. • *Les autres éléments de l'actif* comprennent les autres placements au Canada et les placements dans les institutions et les sociétés constituées à l'étranger, les placements dans les sociétés mères ou les créances sur celles-ci, les filiales et les sociétés affiliées, les comptes clients, les produits constatés par régularisation, les immobilisations, les biens immobiliers et autres avoirs, moins le montant cumulé des provisions pour pertes sur prêts et sur placements.

• *Le poste dépôts à intérêt quotidien* ne comprend que les dépôts détenus par les sociétés comprises dans l'enquête de la Banque du Canada. • *Les dépôts des particuliers* comprennent les dépôts des particuliers, ceux des entreprises non constituées en sociétés et ceux des sociétés à but non lucratif. • *Les dépôts exempts d'impôts* comprennent les RER, les REEF et autres fonds non imposables placés sous forme de dépôts d'épargne et de dépôts à terme. • *La rubrique billets à ordre et débentures* comprend les billets à ordre, les billets subordonnés et les débentures émises en vertu d'un acte fiduciaire. • *Les autres éléments du passif* se composent des sommes dues aux sociétés mères, aux filiales et aux sociétés affiliées, les comptes-fournisseurs et les charges à payer, les impôts à payer sur le revenu des sociétés, les revenus différés, les emprunts hypothécaires, les impôts sur le revenu différés et les autres engagements.

## H5

Source: Statistics Canada

Data are obtained from the Statistics Canada monthly publication "Gross Domestic Product by Industry," Catalogue 15-001 and are generally compiled according to the 1980 Standard Industrial Classification. The industry groups—mines, quarries and oil wells, manufacturing, and other utilities—are the component parts of industrial production.

• The *business sector* includes all enterprises that operate for gain. • The *non-business sector* consists primarily of government services, educational services and hospitals and related health and social services.

## H11

Source: Statistics Canada

Data are obtained from the Statistics Canada publication "The Consumer Price Index," Catalogue 62-001. Beginning in January 1989 the weights used in constructing the index are based on 1986 consumer expenditure patterns, replacing the 1982 weights used from January 1985. Three earlier reweightings occurred, in April 1982 incorporating 1978 expenditure patterns, in October 1978 using 1974 weights and in May 1973 using 1967 weights. In July 1990, with the release of the June 1990 consumer price index, the time base was changed in a purely arithmetic operation from 1981 to 1986=100. Further information on these revisions, as well as on the concepts and methodology, may be obtained from Statistics Canada publications. Effective with the release of the January 1985 numbers Statistics Canada revised the definition of the shelter component to include both goods and services. A consistent historical series was provided back to September 1978.

The percentage changes shown in Column 15 of Table A1 are the rates published by Statistics Canada in Catalogue 62-001.

## H12

Sources: Statistics Canada, Labour Canada

• *Labour income, wages and salaries and profits per unit of output* have been calculated by the Bank of Canada from Statistics Canada data. Labour income per unit of output is obtained by dividing total labour income including military pay and allowances by GDP (in constant 1986 dollars). Non-farm commercial wages and salaries per unit of output are obtained by dividing total wages and salaries less wages and salaries in agriculture, fishing, trapping, public administration and non-commercial services by GDP for the commercial non-farm sector. Manufacturing wages and salaries per unit of output are obtained by dividing manufacturing wages and salaries by gross manufacturing output. Non-farm commercial profits per unit of output are obtained by dividing corporate profits incorporated as a component of GDP by GDP for the commercial non-farm sectors. Except for the last calculation, GDP for the non-farm and commercial non-farm sectors excludes fishing and trapping.

## H13

Sources: Statistics Canada, Labour Canada

• *Retail trade* figures refer to aggregate sales by retail outlets; direct sales to consumers that bypass the retail outlet are not included. In the table, sales of recreational and motor vehicle dealers have been subtracted from total retail sales.

## H5

Source : Statistique Canada

Ces données sont tirées de la publication mensuelle de Statistique Canada intitulée «Produit intérieur brut par industrie», n° de catalogue 15-001; elles sont généralement établies d'après la Classification type des industries de 1980. La production industrielle englobe les secteurs suivants : mines, carrières et puits de pétrole, fabrication et services d'utilité publique.

• Le *secteur des entreprises* comprend toutes les entreprises à but lucratif. • Le *secteur non commercial* comprend principalement les services publics, les établissements d'enseignement, les hôpitaux ainsi que les services de santé et les services sociaux connexes.

## H11

Source : Statistique Canada

Les données proviennent de la publication de Statistique Canada intitulée «L'indice des prix à la consommation» (n° 62-001 au catalogue). À compter de janvier 1989, les pondérations qui servent au calcul de l'indice sont fondées sur la structure des dépenses de 1986 et remplacent les pondérations de 1982, qui étaient utilisées depuis janvier 1982. Les pondérations avaient été révisées à trois reprises auparavant, soit en avril 1982 pour tenir compte de la structure des dépenses de 1978, en octobre 1978 pour tenir compte de la structure des dépenses de 1974 et en mai 1973 pour tenir compte de la structure des dépenses de 1967. En juillet 1990, après publication des données de l'indice des prix à la consommation pour juin 1990, l'ancienne année de base, soit 1981, a été remplacée par 1986; les opérations effectuées ont été purement arithmétiques. On trouvera dans les publications de Statistique Canada de plus amples renseignements sur ces révisions ainsi que sur les concepts et la méthodologie utilisés. La publication des données de janvier 1985 a coïncidé avec la révision par Statistique Canada de la définition du logement; la nouvelle définition de cette composante englobe à la fois des biens et des services. La série chronologique utilisant cette définition remonte à septembre 1978.

Les taux de variation reproduits à la colonne 15 du Tableau A1 sont extraits de la publication n° 62-001 de Statistique Canada.

## H12

Sources : Statistique Canada, Travail Canada

• Le *revenu du travail* et les *bénéfices par unité produite* ont été calculés par la Banque du Canada à partir des données de Statistique Canada. Pour calculer les gains des ouvriers par unité produite, on a divisé l'ensemble des gains des employés (solde et allocations des militaires comprises) par le PIB en dollars de 1986. Les salaires et traitements par unité produite dans les entreprises non agricoles sont calculés en divisant l'ensemble des salaires et traitements moins les salaires et traitements versés aux employés dans l'agriculture, la pêche, le piégeage, l'administration publique et les services non commerciaux par la production brute du secteur. Les salaires et traitements par unité produite des ouvriers dans les industries manufacturières sont calculés en divisant les salaires et les traitements payés dans ces industries par la production brute de celles-ci. Les bénéfices par unité produite des entreprises commerciales, agriculture exclue, sont calculés en divisant le montant global des bénéfices de ces entreprises, qui figure dans le PIB, par leur production brute. Exception faite du dernier calcul, la production brute du secteur non agricole et des entreprises commerciales non agricoles exclut la pêche et le piégeage.

## H13

Sources : Statistique Canada, Travail Canada

• Le *commerce de détail* comprend l'ensemble des ventes des détaillants; les ventes faites directement aux consommateurs sans l'entremise des détaillants sont exclues. Ont été soustraites de l'ensemble des ventes, les ventes de véhicules de tourisme et de véhicules automobiles effectuées par les concessionnaires.

## K5

Sources: Canadian Life and Health Insurance Association, Department of Insurance

Data relate to the assets held in Canada by life insurance branches of Canadian, British and foreign companies registered under the federal insurance acts. Canadian dollar assets held outside Canada are excluded.

Data for 1963 for provincial bonds and corporate and other bonds are affected by a reclassification of corporate bonds as provincially guaranteed bonds resulting from the expropriation of private utility companies by provincial governments that year. Beginning in 1978, guaranteed investment certificates are included in *cash* rather than in *other assets*.

• *Government of Canada, provincial and municipal securities* include guaranteed securities. • *Other assets* include investments in subsidiaries, investment income due and accrued, premiums outstanding, and amounts due from other insurers.

## K8

Source: Bank of Canada

Bonds outstanding are shown at par value. Bonds payable in foreign currencies have been converted into Canadian dollars at the following rates: from 1964, U.S.\$1.00=\$1.081, £1=\$3.027, 1 Swiss franc=\$0.247; from 1967, £1=\$2.595; for 1968, 1 DM=\$0.27, 1 Lira=\$0.00173; for 1969 1 DM=\$0.291. From 1970 these bonds were converted at the closing spot rate for the last business day of December.

• *Other currencies* of payment are Euro-dollars, sterling, Swiss francs, French francs, Deutschmarks, Netherlands guilders, European Currency Units (ECU), European units of account, Hong Kong dollars, Australian dollars, New Zealand dollars, Italian liras, the Japanese yen and optional currencies. • When the currency of issue is *optional* the issues are payable in Canadian or U.S. dollars; Canadian dollars or sterling; Canadian dollars, U.S. dollars or sterling. Canadian dollar issues placed in overseas markets are included with issues payable in Eurodollars. • *Government of Canada* and *provincial* direct and guaranteed bonds do not include treasury bills. • *Municipal bonds* do not include issues guaranteed by the provinces (already included in provincial securities) and issues sold directly to provinces and their agencies. • *Corporate bonds* include all assets of Canadian corporations payable in Canadian dollars or in other currencies with the exception of finance company and commercial paper with an original term to maturity of one year or less and issues sold to a parent company, whether this parent is incorporated in Canada or abroad. • Included under *foreign debtors* are those issues payable in Canadian dollars of the IBRD and certain foreign governments and corporations.

## K5

Sources : Association canadienne des compagnies d'assurance de personnes, Département des assurances

Ces données comprennent les avoirs de la branche Vie détenus au Canada par les compagnies canadiennes, britanniques, anglaises ou étrangères inscrites au Registre fédéral des assurances. En sont exclus les avoirs en dollars canadiens détenus à l'étranger.

En 1963, la composition des titres des provinces et des obligations de sociétés ou d'« autres » emprunteurs a été modifiée de façon à inclure, comme obligations garanties par les provinces, les titres de certaines sociétés de services publics expropriées cette année-là par des administrations provinciales. À partir de 1978, les certificats de placement garantis ont cessé de figurer sous la rubrique *Autres éléments de l'actif* pour être incorporés au poste *Encaisse et dépôts*.

• *Les titres du gouvernement canadien, des provinces et des municipalités* comprennent les obligations garanties par ces administrations. • *Les autres éléments de l'actif* comprennent les investissements dans les filiales, les revenus de placements exigibles ou courus, les primes arriérées d'assurances ainsi que les montants exigibles d'autres assureurs.

## K8

Source : Banque du Canada

Les obligations figurent à leur valeur nominale. La valeur nominale des obligations libellées en monnaies étrangères a été convertie en dollars canadiens aux cours suivants : à partir de 1964, \$É.-U. 1=\$1.081, £1=\$3.027, 1 franc suisse=\$0.247; à partir de 1967, £1=\$2.595; pour 1968, 1 DM=\$0.27, 1 lire=\$0.00173; pour 1969, 1 DM=\$0.291. À partir de 1970, ces obligations ont été converties au cours du comptant à la clôture du dernier jour ouvrable de décembre.

• *Les autres monnaies* de paiement sont, entre autres, l'eurodollar, la livre sterling, le franc suisse, le franc français, le deutsche mark, le florin néerlandais, l'unité monétaire européenne (ECU), les unités de compte européennes, le dollar de Hong Kong, le dollar australien, le dollar néo-zélandais, la lire italienne et le yen japonais. • La mention *au choix*, dans le cas de la monnaie de paiement, signifie que les obligations sont payables en dollars canadiens ou en dollars É.-U.; en dollars canadiens ou en livres sterling; en dollars canadiens, en dollars É.-U. ou en livres sterling. Les émissions libellées en eurodollars comprennent les émissions en dollars canadiens vendues sur les marchés d'outre-mer.

• Les obligations émises ou garanties par le *gouvernement canadien* ou par une *province* ne comprennent pas les bons du Trésor.

• *Les obligations des municipalités* ne comprennent ni les titres émis sous la garantie d'une province (qui sont alors recensés comme obligations provinciales) ni les titres vendus directement aux provinces ou à leurs agences. • *Les obligations des sociétés* englobent toutes les émissions des sociétés canadiennes payables en dollars canadiens ou en monnaies étrangères, à l'exclusion du papier émis par les sociétés de financement et du papier commercial dont l'échéance à l'émission ne dépasse pas un an ainsi que des émissions vendues à des sociétés mères, que ces dernières aient été constituées au Canada ou à l'étranger. • Figurent au poste *Emprunteurs étrangers* des obligations payables en dollars canadiens, émises par la BIRD et certaines sociétés ou certains gouvernements étrangers. • Sont recensées comme titres émis par *Terre-Neuve* les obligations des sociétés de la Couronne dont le capital-actions est entièrement détenu par cette province.

## K9

Source: Bank of Canada

• *Corporate bonds* include issues of Canadian corporations, payable in Canadian and foreign currencies, placed in Canada and abroad. Issues payable in foreign currencies have been converted into Canadian dollars at the average noon market rate for the month of delivery. • *Stocks* include common and preferred stocks issued by Canadian corporations in Canada and abroad. • Issues sold to a parent company in Canada or abroad are excluded. • For the years before 1980 several stock issues, generally of less than \$1 million, are not classified by industry but are included in the total. For those years, therefore, the components do not add up to the total. • Classification by industry is generally based on the 1980 Standard Industrial Classification published by Statistics Canada. Most holding companies are classified as financial companies. Agriculture, fishing, trapping, logging and forestry industries are included in the "service and other" category.

## K9

Source : Banque du Canada

• Les *obligations des sociétés* englobent les émissions de sociétés canadiennes, libellées en dollars canadiens ou en monnaies étrangères, qui sont placées au Canada ou à l'étranger. La valeur des émissions libellées en monnaies étrangères a été convertie en dollars canadiens au taux correspondant à la moyenne mensuelle des cours du change à midi, le mois de la livraison. • Les *actions* comprennent les actions ordinaires ou privilégiées émises par les sociétés canadiennes au Canada ou à l'étranger. • Les émissions vendues à une société mère, au Canada ou à l'étranger, sont exclues. • Pour les années antérieures à 1980, plusieurs émissions d'actions, en général d'une valeur inférieure à 1 million de dollars, ne sont pas réparties par branche d'activité économique, mais sont comprises dans le total. Par conséquent, pour ces années, il est possible que la somme des différents éléments ne corresponde pas au total. • La répartition par branche d'activité économique s'appuie dans l'ensemble sur la Classification des activités économiques qu'a fait paraître Statistique Canada en 1980. Les statistiques relatives à la plupart des sociétés de portefeuille sont comprises dans celles des sociétés financières. Les statistiques relatives à l'agriculture, la pêche, le piégeage et l'exploitation forestière sont comprises dans *Services et autres industries*.

## Cover

### Hamburg: 20 marks, 1899

Two years after the unification of Germany in 1871, the diverse monetary systems formerly used by the member states of the new nation were completely overhauled and replaced by the reichsmark equal to 100 pfennig. Although coins ranging from 1 pfennig to 20 marks were struck for general use, designs and legends of local significance were also included on coins minted in certain states. The 20-mark gold piece shown on this month's cover is a case in point.

Dated 1899, this coin was struck in Hamburg, Germany's major industrial city and one of Europe's busiest ports. The piece features the city's coat of arms – a city gate with three towers – which was taken from Hamburg's great seal of 1241 and has appeared on all of Hamburg's coinage since the Middle Ages. It is surrounded by several heraldic flourishes, the city's mintmark (J), and the legend FREIE UND HANSESTADT HAMBURG (the Free and Hanseatic City of Hamburg). Adopted in 1819, this legend refers to the city's former status as an autonomous state and member of the Hanseatic League – a powerful coalition of north German towns that dominated trade and commerce in the Baltic from the 13th to the 16th century.

The mintage of these state issues ended with the outbreak of World War I. About the size of a Canadian 25-cent piece, this coin forms part of the National Currency Collection, Bank of Canada. Photography by James Zagon, Ottawa.

## Couverture

### Hambourg : Pièce de 20 marks de 1899

Deux ans après son unification en 1871, l'Allemagne se dota d'un système monétaire unifié, remplaçant ainsi complètement les différents systèmes utilisés jusque-là par ses États membres; le mark, équivalant à 100 pfennigs, en devint l'unité monétaire. Même si les pièces de 1 pfennig à 20 marks étaient produites pour servir de numéraire dans l'ensemble du pays, celles frappées dans certains États portaient des motifs et des légendes d'inspiration purement régionale. La pièce d'or de 20 marks illustrée sur la couverture de la livraison de ce mois en est un exemple.

Datée de 1899, cette pièce fut frappée à Hambourg, principale ville industrielle de l'Allemagne et l'un des plus importants ports d'Europe. Elle est ornée du blason de la ville, qui représente une porte surmontée de trois tours et figure sur le grand sceau de Hambourg, créé en 1241; ce motif est d'ailleurs reproduit sur tout le numéraire de Hambourg depuis le Moyen Âge. Le blason est entouré de plusieurs ornements extérieurs, de la lettre J, désignant l'atelier de la ville de Hambourg, et de la devise FREIE UND HANSESTADT HAMBURG (ville libre et hanséatique de Hambourg). Adoptée en 1819, la devise fait référence à l'autonomie dont jouissait la ville et à son adhésion à la Hanse, puissante association de cités de l'Allemagne du Nord, qui, du XIII<sup>e</sup> au XVI<sup>e</sup> siècle, a dominé le trafic commercial de la Baltique.

Le déclenchement de la Première Guerre mondiale a mis fin à la frappe de monnaies par les États de l'Allemagne. La pièce reproduite en couverture est à peu près de la dimension d'une pièce canadienne de 25 cents. Elle fait partie de la Collection nationale de monnaies, Banque du Canada. Photographie : James Zagon, Ottawa.

24 October 1990*

---

*devant la Chambre de Commerce du Grand Moncton  
Moncton (Nouveau-Brunswick)  
le 24 octobre 1990*

It is an honour to be with you this evening at your celebration of business excellence. I also welcome this opportunity to discuss with you the policies of the Bank of Canada – both the principles behind them and what we have been doing in light of recent economic developments.

The Bank of Canada has responsibility for designing and putting into effect monetary policy. This is not a small responsibility, for it means taking decisions that affect all Canadians. And if we are to take the right steps in our day-to-day actions in financial markets, then they must be firmly based within a clearly thought-out and consistent monetary policy framework. We have such a framework. At its heart is the goal of providing a money that can be trusted, a currency that can be counted on *not* to lose its value over time. In other words, the sensible long-run objective and anchor for monetary policy is one of stable prices in our economy.

Price stability is not an end in itself. What counts is what price stability can deliver. We have a market economy, and one of its pillars is the institution of money and monetary exchange. Admittedly, anyone who feels that this institution, and its contribution in making our economy work well, is of no fundamental importance, will find the notion of price stability and

Je vous remercie de l'honneur que vous m'avez fait en m'invitant à célébrer avec vous ce soir l'excellence de vos entreprises. Je profite de l'occasion qui m'est ainsi donnée pour vous exposer les politiques mises en oeuvre par la Banque du Canada, à la fois les principes qui les sous-tendent et les mesures que nous avons prises à la lumière de l'évolution économique récente.

La Banque du Canada est responsable de la formulation et de la mise en oeuvre de la politique monétaire. Il s'agit là d'une attribution importante puisqu'elle nous amène à prendre des décisions qui touchent l'ensemble des Canadiens. Si nous voulons prendre les mesures appropriées dans nos opérations quotidiennes sur les marchés financiers, ces décisions doivent s'inscrire entièrement dans un cadre de politique monétaire clairement défini et homogène. Nous disposons d'un tel cadre. Son objectif central est de donner aux Canadiens une monnaie en laquelle ils puissent avoir confiance, une monnaie dont ils peuvent être sûrs qu'elle *ne* se dépréciera *pas* avec le temps. En d'autres termes, l'objectif sensé et le point d'ancrage à long terme de la politique monétaire consistent dans la recherche de la stabilité des prix au sein de notre économie.

La stabilité des prix n'est pas une fin en soi. Ce sont les avantages qu'elle procure qui importent. Nous avons une économie de marché fondée entre autres choses sur la monnaie et sur les échanges monétaires. Je conçois que ceux qui ne reconnaissent pas l'importance fondamentale de la monnaie et de sa contribution au bon fonctionnement de notre économie trouvent bien étrange la

monetary confidence somewhat bizarre. But we *do* have an economy in which money and monetary exchange is crucial, and for our economy to work as well as it can, sound money is essential. The prices of goods and services are set in money terms. We keep economic score and we frame our day-to-day and longer-term decisions in money terms. Damaging that institution, as inflation must, introduces needless uncertainty and thereby makes our economy less efficient and less productive. It also injects inequity, hurting some groups of people to the benefit of others, and for no socially worthwhile purpose.

The lower the rate of inflation the better. The lower the rate of inflation, the less severe are the losses from inflation. But there *are* losses even with low rates of inflation and they cumulate over time. Furthermore, treating inflation as acceptable today opens the door to progressively higher rates of inflation later. People who advise the Bank of Canada that it should fight inflation only when it is accelerating are in effect suggesting that at all other times monetary policy should ignore inflation, addressing itself say to printing money to finance deficits or to drive down the exchange rate. Perhaps people who give us this advice do not realize that they are in effect advocating a built-in upward ratchet to inflation. That is why we are bound to disappoint them.

In securing a trustworthy monetary standard, the Bank of Canada seeks a rate of growth in money and credit consistent with monetary stability and steady growth in the economy. This is frequently, and incorrectly, referred to as a "high interest rate" policy. In reality, the very opposite is true, since the effect of achieving a non-inflationary environment will be to bring about low interest rates.

It is certainly true that in an environment where inflation pressures are already strong, a policy aimed at ensuring a pace of monetary expansion that is moderate will, other things being equal, induce upward pressure on short-term interest rates. In addition, the Bank's influence on short-term rates can be expected, again with other things remaining equal, to have an effect on the Canadian dollar. However, it is also important to recognize that interest rates and the exchange rate cannot be regarded as monetary policy objectives in themselves. They are the channels through which monetary policy influences spending in the

notion de stabilité des prix et de confiance à l'égard de la monnaie. Mais nous avons bel et bien une économie dans laquelle la monnaie et les échanges monétaires jouent un rôle prépondérant, et pour que cette économie fonctionne le mieux possible il est essentiel que la monnaie que nous utilisons soit solide. Les prix de tous les biens et services sont fixés en termes monétaires. Nous évaluons nos résultats économiques et nous formulons nos décisions quotidiennes et à long terme en termes monétaires. Saper ce fondement monétaire, comme le fera l'inflation sans nul doute, c'est provoquer une incertitude inutile et rendre ainsi notre économie moins efficace et moins productive. Cela apporte également son lot d'inéquité, car certains groupes de gens sont pénalisés au profit d'autres, sans que la société y trouve quelque avantage.

Plus le taux d'inflation est faible, mieux cela vaut. Plus le taux d'inflation est faible, moins les pertes résultant de l'inflation sont graves. Mais même à un bas niveau, l'inflation *engendre* des pertes qui s'accumulent avec le temps. Qui plus est, considérer que le niveau actuel d'inflation est acceptable revient à ouvrir la voie à une montée progressive de celle-ci dans le futur. Ceux qui voudraient que la Banque du Canada ne combatte l'inflation que lorsqu'elle s'accélère veulent dire en fait qu'à tout autre moment la politique monétaire ne devrait pas en tenir compte, que la banque centrale devrait par exemple cautionner le recours à la planche à billets pour financer les déficits ou pousser à la baisse le taux de change. Ceux qui nous tiennent un tel langage ne se rendent peut-être pas compte qu'en fait ils préconisent l'implantation d'une spirale inflationniste dans notre économie. C'est pourquoi nous opposons une fin de non-recevoir à leurs conseils.

Pour assurer la fiabilité de l'unité monétaire, la Banque du Canada cherche à obtenir un taux de croissance de la monnaie et du crédit qui soit compatible avec la stabilité monétaire et avec une croissance continue de l'économie. Cette démarche est souvent taxée, à tort, de politique de « taux d'intérêt élevés ». En fait, c'est tout le contraire, puisque la réalisation d'un climat non inflationniste mènera à des taux d'intérêt bas.

Il est sans doute vrai que, dans un contexte où les pressions inflationnistes sont déjà vives, une politique visant à réaliser un rythme d'expansion monétaire modéré provoquera, toutes choses égales par ailleurs, des pressions à la hausse sur les taux d'intérêt à court terme. En outre, on peut s'attendre à ce que l'influence de la Banque sur les taux d'intérêt à court terme, une fois encore si rien d'autre ne change, se répercute sur le cours du dollar canadien. Toutefois, il importe de reconnaître que le taux d'intérêt et le taux de change ne peuvent être perçus en soi comme des objectifs de la politique monétaire. Ils constituent les

economy as it combats inflationary pressures. More important still, as inflation pressures recede, and people's fears of inflation decline, then the basis is being laid for durable reductions in interest rates. In such an environment, savers do not have to seek high interest rates to compensate for future losses in the value of money.

I have emphasized that we are seeking reductions in interest rates that are durable, and that this durability depends crucially on what Canadians expect to happen to inflation in the future. Nevertheless, some observers appear to believe that the Bank of Canada can dictate interest rates across the spectrum of yields, whether short-, medium- or long-term. This is not the case at all. In fact, the only interest rate over which we exert a major direct influence is the one-day interest rate on liquidity balances held by financial institutions. Our influence over rates longer than one day, the rates at which businesses, households and governments borrow, depends very much on the credibility of our actions. In particular, the Bank's ability to guide interest rates down in a way that they stay down depends on the extent to which our actions are viewed by the market as being consistent with an improving inflation outlook. In this light, trying to force down short-term interest rates by pushing central bank liquidity into the market could well have the opposite effect on longer-term rates, particularly if that inflation outlook is fragile.

Let me at this point also note another widespread view — that a policy of restraint in monetary expansion is totally misguided because in fact it adds to inflation rather than lowers it. This view focusses on the effect of higher business borrowing costs that may be passed on to the consumer, as well as any possible effect of higher mortgage interest rates on prices and on income demands. This is a serious charge, because if it were the whole story, then it would obviously imply that the faster the Bank of Canada prints money, the less inflation there would be. But that does not make sense, and it does not make sense because the effects I just alluded to are far from being the whole story. The overwhelming effect of maintaining a moderate rate of monetary expansion is to keep spending in line with output and to restrain prices. And for reasons I spelled out earlier, there is no justification at all for arguing that inflation, if left unchecked, will lower interest rates.

canaux par lesquels la politique monétaire, lorsqu'elle cherche à contrer les pressions inflationnistes, influe sur la dépense dans l'économie. Ce qui est encore plus important, c'est que les fondements d'une réduction durable de taux d'intérêt se dégagent à mesure que les pressions inflationnistes s'émoussent et que les craintes à l'égard de l'inflation s'atténuent. Dans un tel contexte, les épargnants n'ont pas à rechercher des taux de rémunération élevés pour compenser les dépréciations futures de la monnaie.

J'ai insisté sur le fait que nous recherchions des baisses de taux d'intérêt qui soient durables, et que la perception que les Canadiens ont de l'évolution future de l'inflation est déterminante à cet égard. Néanmoins, certains observateurs semblent croire que la Banque du Canada peut fixer le niveau de tous les taux pratiqués sur les marchés. Ce n'est absolument pas le cas. En fait, le seul taux d'intérêt sur lequel nous exerçons une influence importante et directe est le taux d'intérêt à un jour servi sur les encaisses liquides des institutions financières. Notre influence sur les taux plus longs, c'est-à-dire les taux auxquels empruntent les entreprises, les ménages et les administrations publiques, est largement fonction de la crédibilité des mesures que nous prenons. En particulier, pour que les taux d'intérêt puissent être réduits et rester bas, les opérations de la Banque du Canada doivent être perçues par le marché comme étant compatibles avec une amélioration sur le front de l'inflation. Cela étant, si la banque centrale tente de forcer à la baisse les taux d'intérêt à court terme en injectant davantage de liquidités dans le marché, cela peut bien avoir l'effet contraire sur les taux d'intérêt à plus long terme, surtout si l'évolution de l'inflation est incertaine.

Une autre opinion largement répandue veut qu'une politique de resserrement de la masse monétaire soit totalement erronée parce qu'elle aurait pour effet d'alimenter plutôt que de juguler l'inflation. Cette opinion fait surtout grand cas de l'incidence des coûts de financement élevés pour les entreprises et de la possibilité que ceux-ci soient répercutés sur les consommateurs, ainsi que de la conséquence que des taux hypothécaires plus élevés pourraient avoir sur les prix et sur les revendications salariales. C'est une grave accusation, car dans la mesure où cette proposition embrasse l'ensemble des facteurs en jeu, cela voudrait évidemment dire que pour réduire l'inflation la Banque du Canada n'a qu'à faire imprimer des billets de banque. Mais une telle affirmation serait dénuée de sens, justement parce que les facteurs que je viens d'évoquer sont loin d'être les seuls qui comptent. Le maintien d'un taux modéré d'expansion de la masse monétaire a pour effet dominant d'accorder le rythme de la dépense avec le rythme de la production et de contenir les prix. Par ailleurs, pour les raisons que j'ai déjà exposées, rien n'accrédite l'opinion qu'une inflation laissée sans surveillance engendrera une diminution des taux d'intérêt. Pour s'en convaincre,

Look at Latin America, where high inflation has led to remarkably high interest rates.

The Bank of Canada's actions are not based on the premise that price stability should be achieved virtually immediately regardless of the short-run consequences. However, it is essential that we obtain gradual but progressive reductions in inflation over time. Similarly, the benefits from greater confidence in our money, which stem from a fairer, better-functioning economy that is less prone to debilitating swings in economic activity, do not all appear immediately. Those benefits also accrue over time.

Let me now turn from the framework to the way that policy is put into effect. How the conduct of monetary policy is reflected in financial variables will depend on the economic and financial environment. That environment is constantly changing, of course, and part of the Bank of Canada's job is to understand how and why it is changing.

From the early 1980s, our economy enjoyed a long expansion during which the nation's production of goods and services expanded by a third. Output in New Brunswick increased at about this same rate. But the demands placed on the goods and services available rose even faster, and spending pressures in the economy became particularly marked in the latter part of this expansion. Over the three calendar years to the end of 1989, total dollar spending in Canada rose by 30 per cent. That is a large number. Broad measures of money and credit increased even more quickly. The resulting high level of demand relative to the capacity of the economy to supply goods and services put accelerating upward pressure on prices and costs in our economy. To put it simply, the expansion was not sustainable in the form it was taking. Because less room was available in the economy for output to grow, inflation was taking up an increasing share of total spending. And inflation began to feed upon itself, as demand pressures led to increases in prices, which led to increases in costs, which fed back into prices, and so on.

To resist and reverse those inflation pressures, the Bank of Canada progressively tightened monetary conditions. It has been contended in some quarters that the rates of inflation Canada has been experiencing, reaching 5 1/2 per cent at the beginning of this year, do not warrant the degree of resistance offered by monetary policy, gradual though this resistance has been. Let me pause a moment to consider what could be behind this contention.

on n'a qu'à penser à l'Amérique latine, où un taux d'inflation élevé a provoqué une très forte hausse des taux d'intérêt.

Dans les mesures qu'elle prend, la Banque du Canada ne cherche pas absolument à atteindre presque immédiatement, quelles qu'en soient les conséquences à court terme, l'objectif de stabilité des prix qu'elle poursuit. Cependant, il est essentiel que nous réalisons au fil du temps des réductions graduelles mais constantes du taux d'inflation. De même, les avantages liés à une plus grande confiance à l'égard de notre monnaie, avantages que procure une économie qui fonctionne mieux et de façon plus équitable et qui prête moins le flanc à des variations nuisibles de l'activité, n'apparaissent pas tous immédiatement. Ils se font sentir avec le temps.

J'aimerais maintenant laisser le cadre de la politique monétaire pour vous parler de ses moyens d'action. Le mode d'action de la politique monétaire sur les variables financières dépend de la conjoncture économique et financière du moment. Cette conjoncture n'est évidemment pas immuable, et un des volets du travail de la Banque du Canada consiste justement à tâcher de comprendre comment et pourquoi des changements surviennent.

Notre économie a connu, à partir des années 80, une longue période d'expansion au cours de laquelle la production de biens et services au pays s'est accrue d'un tiers. La production du Nouveau-Brunswick a progressé à peu près au même rythme. Toutefois, la demande de biens et services disponibles a augmenté encore plus rapidement, et les pressions de la dépense au sein de l'économie se sont particulièrement accentuées durant la dernière phase de cette expansion. Au cours de la période de trois années civiles qui s'est terminée en 1989, la dépense nominale globale a augmenté de 30 % au Canada. Il s'agit là d'une hausse considérable. Les agrégats au sens large de la monnaie et du crédit ont progressé encore plus rapidement. Ainsi, l'accroissement de la demande par rapport à la capacité de l'économie de produire des biens et services intensifie les pressions à la hausse sur les prix et les coûts dans notre économie. En termes simples, le rythme d'expansion observé n'était pas soutenable. Comme il y avait de moins en moins de capacités inutilisées dans l'économie, l'inflation s'attribuait une part accrue de la dépense globale. Elle a alors commencé à s'auto-alimenter, en ce sens que les pressions de la demande poussaient les prix à la hausse, ce qui faisait monter les coûts, entraînant de ce fait une nouvelle hausse des prix, et ainsi de suite.

Dans le but de contrer et de renverser ces pressions inflationnistes, la Banque du Canada a resserré progressivement les conditions monétaires. Certains ont soutenu que les taux d'inflation enregistrés au Canada, lesquels ont atteint les 5 1/2 % au début de la présente année, ne justifient pas le degré de resserrement observé, même si celui-ci a été graduel. Permettez-moi de m'arrêter un instant pour examiner ce point de vue.

It could simply be an expression of the view that monetary policy should not aim at monetary stability. This is an argument whose fundamental deficiencies I reviewed earlier in these remarks. Then again, it could reflect a view, also finding support recently, that our inflation is in fact unrelated to excessive demand. However, a careful examination of the record of the past several years reveals this to be an inaccurate view of what has been happening. To be sure, indirect taxes increased, for example, but these are a small part of the overall inflation in prices that has occurred. Furthermore, the strength of home-grown inflationary forces, responding to demand pressures, has in fact been much greater than has shown up in domestic prices. This is because the effect on prices of those domestic forces has been offset in important part by the moderating impact of the rise in the external value of the Canadian dollar – in effect, making imports cheaper.

Finally, the view could reflect a hope that elements or policies in the economy other than monetary policy could be less inflationary. The first point to be made in this regard is that analysis as to how other policies could be improved to help create a less inflationary economy is of course very helpful. Action would be even better. At the same time, monetary policy must deal with the world as it is, not as it might be in some possibly better set of circumstances. The second point is that if there are cost-raising forces in the economy that somehow persist independently of the broad market forces that monetary policy deals with, they are indeed an issue for the economy and for society. So are all forces exploiting monopoly positions in the economy. What does not at all follow, however, is that any damage caused by such forces is eased or reduced by an inflationary monetary policy. Such a policy, by injecting systematic pessimism regarding prospects for inflation, seems more likely to encourage such damage than to diminish it.

Returning to the narrative, and to 1990, it is clear that the situation has been changing considerably this year. Demand in the economy has fallen back from the unsustainably high levels of last year. Output declined in the second quarter, and the measured rate of unemployment has risen.

Indications of easing are also present in the financial aggregates. The pace of advance in the monetary aggregate M2 (the measure of money we look at most closely) slowed markedly

Cela pourrait peut-être tout simplement vouloir dire que la politique monétaire ne doit pas viser la stabilité de la monnaie. J'ai déjà relevé les carences fondamentales de cet argument. Mais peut-être cela pourrait-il traduire la perception, qui se répand également depuis peu, que l'inflation observée au pays n'est pas reliée à une demande excessive. Un examen minutieux de l'évolution économique observée au cours des dernières années établit toutefois l'inexactitude de cette perception des choses. Les impôts indirects ont certes augmenté, par exemple, mais ils n'expliquent qu'une petite partie de l'accroissement global que les prix ont enregistré. De plus, la vigueur des forces inflationnistes de source canadienne tenant aux pressions de la demande a en fait été beaucoup plus grande que la hausse des prix qui a eu lieu ne le laisse voir. Cela s'explique par le fait que l'incidence de ces forces intérieures sur les prix a été en grande partie contrebalancée par l'effet modérateur de l'appréciation du dollar canadien sur les marchés extérieurs, qui a en réalité rendu les produits importés moins chers.

Finalement, cette perception pourrait traduire l'espoir qu'il serait possible de trouver des mécanismes ou des politiques plus efficaces que la politique monétaire pour combattre l'inflation. À cet égard, la première observation qu'on pourrait faire est qu'il est évidemment très utile d'étudier comment il serait possible d'améliorer d'autres politiques afin de favoriser la création d'une économie moins inflationniste. Mais il serait encore plus utile de prendre des mesures concrètes à ce chapitre. Entre-temps, la politique monétaire doit composer avec le monde tel qu'il est dans la réalité, et non pas tel qu'il pourrait être dans des circonstances peut-être plus favorables. La deuxième observation est que, s'il y a des forces en jeu dans l'économie qui font augmenter les coûts et qui existent indépendamment des grandes forces du marché auxquelles s'attaque la politique monétaire, elles représentent effectivement un problème pour l'économie et pour la société. Il en va de même pour toutes les forces qui occupent une position de monopole dans l'économie. Mais ce à quoi on ne doit pas s'attendre, c'est qu'une politique monétaire inflationniste vienne alléger ou atténuer le tort que ces forces pourraient causer. Une telle politique, en nourrissant un pessimisme systématique à l'égard de l'évolution de l'inflation, semble plus susceptible d'aggraver ces torts que de les diminuer.

Revenant à 1990, il est clair que la situation a évolué considérablement cette année. La demande au sein de l'économie a fléchi par rapport aux niveaux insoutenables atteints l'an dernier. La production a baissé au deuxième trimestre et le taux de chômage mesuré a augmenté.

L'évolution des agrégats financiers trahit également une certaine détente. Le rythme de croissance de l'agrégat monétaire M2 (il s'agit de la mesure que nous surveillons de plus près) a considérablement ralenti au cours des premiers mois de l'année. Il en est de même de la progression de l'ensemble du crédit.

in earlier months of this year. And the rate of increase in total credit has decelerated significantly. With respect to the recent slowdown in the growth of monetary aggregates, it is important, as with the economy generally, to view it in the context of the earlier strong and prolonged surge. For example, M2 remains well above its level of a year ago. Sustained weakness in monetary aggregates would certainly be an important consideration propelling Bank of Canada actions in the direction of ease, but there is a good deal of short-term volatility in the aggregates and it is important to look at averages over longer periods of time.

As the demand pressures on inflation became less intense, scope emerged for easier monetary conditions. Short-term interest rates have declined in recent months by about one and one-half percentage points. Given the change in economic conditions, this change in interest rates is of course consistent with a monetary policy framework oriented in the direction of price stability. The lower inflation generated by an easing of inflation pressures is, after all, a basic condition for lower interest rates.

Many would like to have seen much larger reductions in interest rates than have occurred. However, the present turbulent situation, with so many cross currents and uncertainties, calls for particular caution in monetary policy actions.

Because inflation pressures persisted for so long in Canada, concerns about continuing, even worsening, inflation have accumulated. Accordingly, the momentum that had so clearly developed in inflation has been slow to reverse.

Other factors also are at work. A recent development has been the crisis in the Middle East and related developments in the international oil market. Oil prices have risen dramatically worldwide, with an immediate impact on bond, equity and foreign exchange markets. Longer-term interest rates have risen both in Canada and abroad, reflecting, besides a general increase in the demand for funds on world capital markets, heightened uncertainty over the potential effect on inflation and the adequacy of the response of economic policies.

Canada's experience with the rapid oil price increases in the 1970s and early 1980s shows that oil shocks can be a significant direct source of inflation. In addition, attempts to seek higher money compensation to avoid the implied, but ultimately unavoidable, reduction in real incomes that accompanies high oil

L'essoufflement récent de la croissance des agrégats monétaires, comme celui de l'économie en général, doit être examiné à la lumière de l'essor considérable et prolongé observé auparavant. Par exemple, M2 reste bien au-dessus du niveau qu'il avait atteint l'an dernier. La faiblesse continue des agrégats monétaires serait certainement un facteur important qui ferait orienter les actions de la Banque dans la voie de la détente, mais, compte tenu de la grande instabilité à court terme de ces agrégats, il est important de suivre leur évolution moyenne sur de plus longues périodes.

Le relâchement des pressions que la demande exerce sur l'inflation a fourni la marge de manoeuvre nécessaire à un assouplissement des conditions monétaires. Au cours des derniers mois, les taux d'intérêt à court terme ont baissé d'environ un point et demi de pourcentage. Compte tenu de l'évolution de la conjoncture économique, ce mouvement des taux d'intérêt est évidemment compatible avec une politique monétaire axée sur la stabilité des prix. Le repli du taux d'inflation attribuable à une atténuation des pressions inflationnistes est, après tout, une condition essentielle à la baisse des taux d'intérêt.

D'aucuns auraient souhaité voir les taux d'intérêt baisser beaucoup plus qu'ils ne l'ont fait. La conjoncture actuelle, marquée toutefois par l'instabilité et par tant de contre-courants et d'incertitudes, exige que les mesures de politique monétaire soient prises avec une circonspection particulière.

Étant donné la persistance des pressions inflationnistes au Canada, les craintes que l'inflation perdure, ou même s'aggrave, se sont multipliées. Aussi l'élan qu'avait manifestement pris l'inflation ne s'est-il inversé que lentement.

D'autres facteurs font également sentir leur effet; par exemple, la crise qui a éclaté dernièrement au Moyen-Orient et ses incidences sur le marché mondial du pétrole. Partout dans le monde, les prix du pétrole ont connu une hausse spectaculaire, qui s'est immédiatement répercutée sur les marchés des obligations, des actions et des changes. Les taux d'intérêt à long terme ont augmenté tant au pays qu'à l'étranger, ce qui reflète, outre l'augmentation générale de la demande de capitaux sur les marchés financiers internationaux, l'incertitude accrue à l'égard de l'effet que le renchérissement pétrolier pourrait avoir sur l'inflation et à l'égard de la pertinence des mesures économiques prises en l'occurrence.

Les hausses rapides du prix du pétrole au Canada dans les années 70 et au début des années 80 nous ont appris que les chocs pétroliers peuvent constituer une importante source de pressions inflationnistes. De plus, essayer d'obtenir des compensations monétaires plus élevées pour éviter la baisse implicite, mais en définitive inéluctable, des revenus réels qu'entraîne un renchérissement du pétrole favoriserait davantage l'inflation. Un des éléments qui jouent actuellement en notre faveur est que notre économie est plus efficiente en

prices would contribute further to inflation. One element that is helpful this time round is that our economy is now more energy-efficient and relies less on oil relative to other forms of energy, but the potential effects of the price increases are nevertheless sizable.

Monetary policy must guard against allowing such pressures to fan an inflationary process. It would be irresponsible for monetary policy actions to encourage fears of resurgent inflation, because this would damage progress in improving the overall economic situation. It is not possible to avoid blips in prices, but monetary policy needs to encourage people to take economic decisions on the basis that inflation will decline over time, and not the reverse.

The oil shock has the same inflationary potential for New Brunswick as for the rest of the economy. As I noted earlier, New Brunswick shared in the sustained expansion of the 1980s, experiencing a particularly high level of investment in recent years. Employment growth was strong over much of the period, although the unemployment rate fell relatively slowly, given large increases in the labour force. The provincial inflation rate accelerated in 1989, and in the first half of 1990 was over 5 per cent. Inflation has since eased. As with Canada generally, the New Brunswick economy, in part affected by less buoyant demand in its major export markets, is showing signs of slowing in 1990.

In concluding, let me extend the congratulations of the central bank, its directors and officers, to the City of Moncton in its centenary year. The Bank of Canada was established some 50 years ago, so you have been around almost twice as long as we have. And the sense of history and continuity that goes with the territory can give you a good sense of perspective from which to view and participate in the changing scene.

The Bank of Canada, in fulfilling its monetary policy responsibilities, also needs perspective if it is to do its job properly. We are constantly engaged in dealings with financial markets. But, as I have aimed to indicate, what we do in markets is shaped above all by our responsibilities for Canada's future, to provide a money that can be trusted. That is the assurance and the continuity that we can provide as you enter your second century.

matière d'utilisation de l'énergie et dépend moins du pétrole par rapport à d'autres formes d'énergie. Il n'en reste pas moins que les répercussions éventuelles des augmentations de prix sont considérables.

La politique monétaire doit faire en sorte que de telles pressions ne déclenchent pas un processus inflationniste. Les autorités monétaires feraient preuve d'irresponsabilité si elles encourageaient, par leurs initiatives, les craintes d'une recrudescence de l'inflation, car cela nuirait aux chances d'une amélioration de la situation économique générale. Les à-coups dans le rythme d'évolution des prix ne peuvent être évités; toutefois, la politique monétaire doit inciter les gens à fonder leurs décisions économiques sur l'hypothèse que l'inflation baissera progressivement au fil du temps et non qu'elle augmentera.

Le choc pétrolier présente les mêmes risques inflationnistes pour le Nouveau-Brunswick que pour le reste de l'économie. Comme je l'ai déjà fait remarquer, le Nouveau-Brunswick a bénéficié lui aussi de l'expansion économique soutenue des années 80 et connaît un niveau d'investissement particulièrement élevé ces dernières années. Pendant une grande partie de cette période, la croissance de l'emploi a été forte, bien que le taux de chômage ait fléchi assez lentement, étant donné les fortes augmentations de la population active. Le taux d'inflation pour la province s'est accéléré en 1989 et, au cours du premier semestre de 1990, il se situait à plus de 5 %. L'inflation s'est atténuée depuis. Tout comme dans l'ensemble du pays, l'économie du Nouveau-Brunswick, touchée en partie par le ralentissement de la demande provenant de ses principaux marchés d'exportation, montre depuis le début de l'année des signes d'essoufflement.

J'aimerais en terminant adresser, en mon nom propre et au nom des administrateurs et des cadres de la Banque du Canada, nos félicitations à la ville de Moncton à l'occasion de son centenaire. La Banque du Canada ayant été fondée il y a environ 50 ans, votre ville est donc deux fois plus vieille que notre institution. L'ancienneté et la continuité qui caractérisent votre collectivité vous placent en bonne position pour suivre et influencer l'évolution de la situation.

Pour s'acquitter comme il se doit de ses responsabilités d'autorité monétaire, la Banque du Canada doit également occuper une position privilégiée. Nous effectuons constamment des opérations sur les marchés financiers. Mais, comme j'ai tenté de vous l'expliquer, ces opérations sont surtout dictées par l'obligation que nous avons, pour l'avenir du Canada, de donner aux Canadiens une monnaie qui inspire confiance. C'est l'assurance et le sens de continuité que nous pouvons vous donner au moment où s'amorce le deuxième siècle de votre existence.

# Clearing and settlement of financial transactions: A perspective from the Bank of Canada

# Le point de vue de la Banque du Canada sur la compensation et le règlement des transactions financières

*Notes for Remarks by*

*John W. Crow*

*Governor of the Bank of Canada*

*at the Treasury Management Association of Canada's*

*Eighth Annual Cash and Treasury Management Conference*

*Toronto, Ontario*

*7 November 1990*

*Allocution prononcée par*

*John W. Crow*

*gouverneur de la Banque du Canada*

*à la 8<sup>e</sup> Conférence annuelle*

*de l'Association de gestion de trésorerie du Canada*

*Toronto (Ontario)*

*le 7 novembre 1990*

As Governor of the Bank of Canada, my speeches often concern monetary policy – its framework and the economic environment in which it is conducted. This conference gives me an occasion to break out of that pattern, at least temporarily. I am here today to share with you a Bank of Canada perspective on matters related to the clearing and settlement of financial transactions.

Of course, this topic is not unrelated to monetary policy. The Bank of Canada needs stable and efficient financial markets and well-functioning clearing and settlement systems if it is to carry out monetary policy in an efficient manner. Indeed, it is the central bank's control over the availability of ultimate means of settlement in the economy that is the crucial lever of monetary policy. This control over settlement balances also means that central banks traditionally act as lenders of last resort to the financial system. By their very nature, clearing and settlement systems concentrate activity by linking all participants together through a clearing house. As a result these systems have the potential to transmit problems from one participant to others, or worse still, to other systems and markets, and thus to threaten the

En tant que gouverneur de la Banque du Canada, je suis souvent appelé à prononcer des discours qui portent sur la politique monétaire, son cadre de référence et le contexte économique dans lequel elle est mise en oeuvre. Je saisis donc avec plaisir l'occasion que m'offre votre Association de sortir momentanément des sentiers battus. En effet, je vais vous entretenir aujourd'hui du point de vue de la Banque du Canada sur des questions liées à la compensation et au règlement des transactions financières.

Il existe évidemment des liens entre le sujet choisi et la politique monétaire. Car pour que la politique monétaire mise en oeuvre par la Banque du Canada puisse donner sa pleine mesure, il est indispensable que les marchés financiers soient stables et efficaces et que les systèmes de règlement et de compensation fonctionnent bien. De fait, c'est le contrôle qu'exerce la banque centrale sur l'offre de moyens ultimes de paiement dans l'économie qui est le principal levier de la politique monétaire. Le contrôle que les banques centrales exercent sur les soldes de règlement implique aussi qu'elles jouent habituellement le rôle de prêteur de dernier ressort dans le système financier. De par leur nature, les systèmes de compensation et de règlement centralisent les opérations en regroupant tous les participants au sein d'une chambre de compensation. Ils peuvent donc transmettre les problèmes d'un participant aux autres participants

stability of the financial system generally. Problems in a poorly designed clearing and settlement system could lead to unexpected and large requirements for liquidity support from the central bank.

Many people have an interest in the efficiency and reliability of clearing and settlement systems. After all, such systems are crucial in facilitating the daily flow of financial transactions that are an integral part of trade and commerce in the economy. I cannot think of a better venue for discussing this important topic than this Annual Cash and Treasury Management Conference.

Today, I would like to give you an overview of the remarkable amount of activity taking place in Canada and in other major industrial countries: activity that is aimed at improving the efficiency and safety of clearing and settlement systems. I will refer to the Bank of Canada's involvement in these matters and will conclude with a discussion of the policy issues that they raise.

The high level of activity in this area reflects a profound change in the global financial environment. Massive increases have taken place in the volume, value and complexity of financial transactions in world markets, and at the same time deregulation and liberalization of capital movements have strengthened international linkages. This means that not only have settlement and liquidity risks risen with higher volumes, but it is more likely that a problem originating in one market will contaminate other markets.

Although many market participants had some intuition of such possibilities, it took a number of disturbances to jolt the financial community into examining the issues systematically and beginning to make the necessary adjustments. Among the most significant of these disturbances was the computer failure at the Bank of New York in November 1985, resulting in the Federal Reserve Bank of New York extending overnight financing to that one institution of almost U.S.\$23 billion – a collateralized advance almost double the total size of the institution. And of course there was the stock market crash of October 1987. These disturbances, and others since, were effectively contained through co-operation among major market participants, and through official action. You probably recall the temporary injection of liquidity by central banks that helped to prevent the October 1987 financial problems from degenerating into solvency problems. In retrospect, it is clear

ou, pis encore, aux autres systèmes et marchés et menacer ainsi la stabilité du système financier en général. L'apparition de problèmes dans un système de compensation et de règlement mal conçu peut donner lieu à des demandes de soutien financier massives et inattendues auprès de la banque centrale.

Il est de l'intérêt de beaucoup de gens que les systèmes de compensation et de règlement soient efficaces et fiables. Après tout, ces systèmes ont pour tâche fondamentale de faciliter le flux quotidien des nombreuses transactions financières auxquelles donnent lieu les échanges commerciaux effectués dans l'économie. Je ne peux imaginer de meilleure tribune que celle que m'offre cette conférence annuelle sur les questions de gestion de trésorerie pour traiter ce sujet.

Je vais donc vous donner aujourd'hui un aperçu des travaux considérables qui se déroulent au Canada et dans les autres grands pays industriels et qui visent à améliorer l'efficacité et la sécurité des systèmes de compensation et de règlement. Je parlerai de la participation de la Banque du Canada à cette entreprise et, pour conclure, j'aborderai les questions qui en découlent en matière de politique.

Si les efforts déployés pour améliorer ces systèmes sont si intenses, c'est que le cadre financier international est en profonde mutation. On observe des augmentations considérables du volume, de la valeur et de la complexité des transactions sur les marchés mondiaux. Parallèlement, la déréglementation et la libéralisation des mouvements de capitaux ont renforcé les liens entre ces marchés. En d'autres termes, non seulement l'augmentation des volumes a-t-elle accru les risques de règlement et de liquidité, mais les problèmes provenant d'un marché donné seront plus susceptibles de se transmettre à d'autres marchés.

Bien qu'un grand nombre de participants aux marchés aient senti la possibilité que surviennent de tels problèmes, il aura fallu un certain nombre de perturbations avant que la communauté financière ne se penche sérieusement sur la question et ne commence à apporter les ajustements nécessaires. Parmi les perturbations les plus importantes qui sont survenues, mentionnons la panne des ordinateurs de la *Bank of New York* en novembre 1985, panne qui a amené la Banque fédérale de réserve de New York à accorder à cette institution un prêt à un jour de près de 23 milliards de dollars É.-U., soit une avance garantie dont le montant était presque deux fois la taille de l'institution. On peut aussi, bien sûr, citer la crise boursière d'octobre 1987. Ces perturbations, et d'autres qui se sont produites depuis, ont pu être efficacement contenues grâce à la coopération des principaux participants aux marchés et aux interventions des pouvoirs publics. Vous vous rappellerez sans doute qu'en octobre 1987 les banques centrales avaient injecté temporairement des liquidités dans leurs

that the global community has come altogether too close to situations where market difficulties could have been severe enough to inflict lasting damage on financial markets and even on national economies.

The mere chance that key Canadian financial markets, not to mention global financial markets, might be seriously disrupted by unexpected events is enough to make all of us uncomfortable. What is being done to manage and reduce this risk and uncertainty? In answering this question, I want to review the work that is being done in Canada to ensure that the clearing and settlement of financial transactions remains on a solid basis. This work includes projects in three areas: the securities market, the payments system and the foreign exchange market.

I will begin with the securities clearing and settlement side, where a number of potentially serious problems were brought into relief as a result of the October 1987 stock market "crash." The most important of these was a heightened awareness that purchasers of securities might in fact not be prepared to pay for them at delivery if there were a sharp decline in the market value between the time when they were bought and the time when they had to be paid for. Obviously, the longer the lag between transaction and payment, the greater the uncertainty whether a securities deal will in fact settle. This time-lag problem was, and still is, compounded by the wide divergences among the settlement practices prevailing in major countries. In some countries – Canada and the United States for instance – stock market deals settle five business days after the transaction is struck. But in some other countries, France and Great Britain for example, the settlement of stock market transactions occurs only once or twice a month.

Following the 1987 stock market crash, a number of reports were produced dealing with these issues. One of the most important was by a prestigious international group of business and financial leaders known as the Group of Thirty (G-30). This report dealt with cross-border issues and it proposed the harmonization of practices across countries. The report's nine specific recommendations – the most notable of which call for central depositories for securities, delivery versus payment, and rolling settlement – are aimed at improving the efficiency and safety of

systèmes financiers respectifs pour tenter d'empêcher que les problèmes financiers créés par la crise ne dégénèrent en problèmes de solvabilité. Avec le recul, on voit clairement que la communauté internationale a frôlé de trop près des situations où les difficultés ressenties par les marchés auraient pu être assez graves pour causer des torts durables aux marchés financiers, voire aux économies.

La simple éventualité que les principaux marchés financiers au Canada, sans parler des marchés financiers internationaux, puissent être gravement perturbés par des événements inattendus suffit à nous causer à tous quelque inquiétude. Il convient alors de se demander ce qui est fait pour gérer et réduire ce risque et l'incertitude qu'il suscite. Pour répondre à cette question, j'aimerais passer en revue les efforts déployés ici au Canada en vue de renforcer les bases des systèmes de compensation et de règlement des transactions financières. Ces efforts touchent trois domaines : le marché des valeurs, le système de paiement et le marché des changes.

Je parlerai d'abord du règlement des transactions sur le marché des valeurs, où des problèmes qui auraient pu être graves ont été mis en relief par la crise boursière d'octobre 1987. Le plus important problème dont on a alors pris pleinement conscience est que les investisseurs pourraient en fait ne pas être disposés à régler leurs achats de titres au moment de la livraison si la valeur marchande de ces derniers avait fortement baissé entre le moment de l'acquisition et celui du règlement. Évidemment, plus il s'écoule de temps entre le moment de l'achat et celui du règlement, plus la transaction risque de ne pas se régler dans les faits. Ce délai entre l'achat et le règlement a été et demeure aggravé par les fortes divergences qui existent entre les modes de règlement des grands pays. Dans certains pays, comme le Canada et les États-Unis, les opérations sur titres boursiers sont réglées cinq jours ouvrables après leur conclusion. Dans d'autres pays, la France et la Grande-Bretagne par exemple, le règlement de ces types d'opérations n'a lieu qu'une ou deux fois par mois.

Un certain nombre de rapports traitant les questions auxquelles je viens de faire allusion ont paru après la débâcle boursière de 1987. À cet égard, le rapport publié par un groupe international d'éminents représentants des milieux d'affaires et de la finance de plusieurs pays, connu sous le nom de Groupe des trente, compte parmi les plus importants. Ce rapport, qui traite de questions débordant les frontières nationales, préconise une harmonisation des pratiques de compensation et de règlement des divers pays. Les neuf recommandations particulières du rapport, qui concernent notamment la nécessité de mettre en place des centres de dépôt des valeurs, la livraison contre règlement et le règlement journalier, visent à améliorer l'efficacité et la fiabilité des marchés de

securities markets around the world. Delivery versus payment, as many of you know, is the simultaneous delivery of securities against the receipt of value by the delivering party. Rolling settlement – as opposed to periodic settlement – means the daily settlement of transactions negotiated a specified number of days beforehand. The major industrial countries, including Canada, have now endorsed the G-30 recommendations in principle and are working to make the necessary changes in their respective markets.

At present clearing and settlement arrangements vary widely from country to country. Canadian securities markets are relatively advanced. They already conform to, or are moving towards conformity with, the general thrust of the G-30 recommendations. The major areas requiring change in Canada are the proposed earlier trade settlement for equities transactions (known as the T+3 recommendation) and same-day, irreversible, settlement of the payment. It is clear that shortening the equity settlement period from five days after trade date, as it is now in Canada, to just three days will significantly reduce the number of unsettled trades outstanding. This will reduce both market price exposures and counterparty risk.

Making the changes required to comply with the G-30 recommendations has different implications for different segments of the Canadian financial system. These implications are now being examined by committees made up of representatives of the major sectors of the financial industry. The Bank of Canada is involved in this work and thus is able to monitor progress.

Also on the securities side, work is progressing in the financial community on expanding the scope of operations of the Canadian Depository for Securities (CDS). Large portions of the fixed income securities held in Canada are not presently immobilized in a central depository. Transporting these securities by messenger, in addition to being inefficient, heightens the danger of theft and loss. A secure clearing and settlement system is under development for both debt transactions and money market instruments. The Bank of Canada, in its role as the government's fiscal agent and as a potential participant itself, is co-operating with the major segments of the financial community in this project. Once in place and properly constructed, the new system

valeurs de par le monde. La livraison contre règlement, comme beaucoup d'entre vous le savent, consiste dans la livraison de titres et la réception simultanée d'une valeur en contrepartie. Le règlement journalier, par opposition au règlement périodique, signifie le règlement quotidien d'opérations conclues pour un nombre de jours fixé à l'avance. Les grands pays industriels, dont le Canada, ont accepté en principe les recommandations du Groupe des trente et s'efforcent maintenant d'effectuer chez eux les ajustements qui s'imposent.

Les mécanismes actuels de compensation et de règlement des opérations sur titres diffèrent largement selon le pays. Chez nous, ils sont relativement avancés. S'ils n'opèrent pas déjà conformément aux recommandations générales du Groupe des trente, ces mécanismes font actuellement l'objet d'ajustements en ce sens. La réduction du délai de livraison dans les opérations sur actions (la recommandation T+3) et le règlement le même jour à caractère irréversible sont les principaux domaines où des changements s'imposent au Canada. Il est manifeste que, si l'on raccourcit le délai de livraison des titres boursiers de cinq jours (comme c'est le cas au Canada) à trois jours après la date de la transaction, cela aura pour effet de réduire considérablement le nombre des transactions non réglées. De tels arrangements entraîneront également la réduction tant des risques liés aux variations des prix du marché que du risque de contrepartie.

La mise en oeuvre des modifications qui s'imposent en conformité avec les recommandations du Groupe des trente n'a pas la même incidence sur tous les segments du système financier canadien. Des comités regroupant les représentants des principaux secteurs du milieu financier étudient actuellement les conséquences possibles de ces modifications. La Banque du Canada participe aux travaux de ces comités et est ainsi à même de suivre les progrès accomplis.

Toujours dans le domaine des titres, la communauté financière est à l'oeuvre en vue d'étendre la portée des opérations de la Caisse Canadienne de Dépôt de Valeurs (CDS). De grandes quantités de titres à revenu fixe détenues au Canada ne sont actuellement immobilisées dans aucun compte central de dépôt. En plus d'être inefficace, le transport de ces titres par messagerie accroît le risque de vol et de perte. La communauté financière élabore actuellement un système de compensation et de règlement sûr pour traiter à la fois les opérations sur titres de dette et les opérations sur les instruments du marché monétaire. En qualité d'agent financier du gouvernement canadien, et à titre de participant éventuel, la Banque du Canada collabore avec les principaux secteurs des milieux financiers à la réalisation de ce projet. Lorsqu'un nouveau système bien conçu sera en place, il accroîtra l'efficacité des marchés tout en réduisant considérablement les risques inhérents au système actuel. Entre-temps, cet

will increase efficiency while at the same time substantially reducing the risks in the present environment. In the meantime an immediate and valuable by-product of this important project has been a strengthening of the risk containment mechanisms prevailing in existing CDS services, and a generally greater awareness of the risks involved in the business of clearing and settling securities transactions.

Improvements are also being planned for the Canadian payments system, where the major issues are the achievement of payment finality and the determination of an appropriate distribution of risk in the system. The Canadian Payments Association (CPA), whose chairman is an officer of the Bank of Canada, is working on a proposal to set up a large-value transfer system or LVTS – an electronic credit transfer system for large-value items. The LVTS will in effect be a clearing and settlement system for payments. It is being designed to provide irreversible settlement and therefore to support finality of payment. The initiative for the project has come from the CPA member institutions concerned about the risks inherent in the present payment system environment. While there are complex issues involved in the design of such a system, all parties involved, including the Bank of Canada, recognize the importance of achieving finality of payment. Achieving finality is important, because at that point the recipient not only has possession but also has unchallenged right to the funds in question.

Turning to international banking markets, considerable effort is being devoted to issues related to interbank netting schemes for cross-border payments and foreign exchange transactions. It is not difficult to see why. The volume and size of transactions in the foreign exchange market have been growing very rapidly over recent years. We know that they doubled in the three years to April 1989. The credit and liquidity risks of institutions involved in these markets have increased apace.

Some of our chartered banks have already responded to these increased risks by entering into bilateral netting arrangements with each other for foreign exchange transactions. Bilateral netting, which reduces the numerous individual payments that must be made between two counterparties on any given day to just one single payment per currency, effectively reduces the

important projet aura eu une conséquence immédiate et heureuse, en ce sens qu'il aura permis aux intervenants de renforcer les mécanismes de réduction des risques intégrés aux services actuels de la Caisse Canadienne de Dépôt de Valeurs et d'être en général plus conscients des risques que comportent la compensation et le règlement des opérations sur titres.

On envisage aussi d'apporter des améliorations au système de paiement canadien, où la finalité des paiements et une répartition appropriée des risques constituent les principales questions à résoudre. L'Association canadienne des paiements (ACP), qui est présidée par un cadre supérieur de la Banque du Canada, examine actuellement un projet visant la mise en place d'un système électronique de transfert de gros montants. Il s'agira en fait d'un système de compensation et de règlement des paiements. Il est appelé à assurer l'irréversibilité des règlements et, par voie de conséquence, à soutenir la finalité des paiements. Le projet en question a été entrepris à l'initiative des institutions membres de l'ACP préoccupées par les risques inhérents au système de paiement actuel. Même si l'élaboration d'un tel système pose des problèmes complexes, tous les membres, y compris la Banque du Canada, reconnaissent qu'il est important que soit concrétisée la finalité des paiements, car celle-ci signifie non seulement que le bénéficiaire entre en possession des fonds en question, mais que ceux-ci resteront incontestablement en sa possession.

Tournons-nous maintenant du côté des marchés bancaires internationaux. Des efforts considérables sont consacrés aux questions liées aux systèmes de compensation interbancaire de transactions transfrontières de paiement et de change. La raison en est simple. Au cours des dernières années, le volume et la taille des opérations sur devises se sont accrus très rapidement. En avril 1989 par exemple, ils représentaient le double de ce qu'ils avaient été trois ans auparavant. Les risques de crédit et de liquidité qu'encourent les institutions qui participent à ces marchés ont augmenté en conséquence.

En réaction à ces risques accrus, un certain nombre de banques à charte canadiennes ont déjà conclu entre elles des accords de compensation bilatérale des opérations sur devises. La compensation bilatérale, qui a la vertu de fondre en un seul montant par devise les nombreux paiements qui ont lieu un jour donné entre deux institutions, réduit de fait le risque de crédit qu'elles courent puisqu'il ne porte plus sur un montant brut, mais sur un montant net. C'est ce qu'on appelle la compensation par novation.

Les mécanismes de compensation multilatérale sont conçus de façon à étendre les avantages de la compensation financière, mais ils sont par définition beaucoup plus complexes. Ils englobent les opérations de change déclenchées par n'importe lequel des membres d'un groupe de participants. Leur

credit exposure between the two counterparties from a gross to a net amount. The technical term for this type of arrangement is netting by novation.

Multilateral netting arrangements are designed to extend the benefits of netting, but by definition these types of arrangements are substantially more complex. They cover foreign exchange contracts that originate with any one of a group of participating counterparties. They require the establishment of a clearing house to act as a central counterparty to all transactions. Such arrangements have the potential to reduce the credit and liquidity risks substantially further – both the risks to participants and the risks to the financial system as a whole. Some estimates promise a reduction of up to 90 per cent of gross counterparty credit risk. However, this impressive reduction in risk depends critically on the enforceability of the netting itself and on the financial condition of the clearing house. The failure of a clearing house would clearly have systemic effects. It could impose losses on all of its participants, and it could create liquidity pressures in the money markets for all of the currencies involved in the netting.

Because of these systemic risks, and because of the cross-border nature of the schemes, the central banks of the Group of Ten countries have spent the last year and a half examining issues related to cross-border and multi-currency netting. An important report on this subject will be published in the next few weeks under the auspices of the Bank for International Settlements.

The fact that Canadian groups are at the same time working on similar initiatives in the areas of payments, foreign exchange, and securities settlement has provided the private sector and the authorities with fertile ground for co-operation. Restructuring clearing and settlement systems is an enormously complex task. This is in part because of the interrelationships among the proposed systems. For example, it is expected that the electronic payments system, aimed at enhancing finality of payment, will eventually be used for the net settlement of both securities deals and the Canadian dollar side of foreign exchange transactions.

The restructuring process also involves some important and complex public policy considerations, to which I now turn.

There are four main policy requirements, and they apply to all three of the clearing and settlement projects to which I have

fonctionnement exige que soit institué un organisme central de compensation, qui sert de contrepartie à toutes les transactions. De tels mécanismes sont susceptibles de réduire encore plus le risque de crédit et de liquidité encouru par les participants et par le système financier dans son ensemble. D'après certaines estimations, le risque de crédit à l'égard de la valeur brute des opérations pourrait être réduit dans une proportion pouvant aller jusqu'à 90 %. Toutefois, pour qu'une telle réduction puisse être réalisée, il faut absolument que les accords de compensation aient force exécutoire et que la situation financière de l'organisme central de compensation soit solide. La faillite d'un organisme de compensation aurait évidemment des répercussions systémiques. Elle pourrait entraîner des pertes pour tous les participants et provoquer des pressions sur le plan des liquidités dans les marchés monétaires pour toutes les monnaies visées dans les transactions soumises au mécanisme de compensation et de règlement.

Compte tenu de ces risques systémiques, et comme il s'agit de mécanismes de compensation débordant les frontières nationales, les banques centrales du Groupe des dix se sont penchées ces dix-huit derniers mois sur les questions liées aux systèmes de compensation transfrontières et multidevises. À cet égard, un important rapport sera publié dans les prochaines semaines par l'entremise de la Banque des Règlements Internationaux.

Le fait que des groupes d'intervenants canadiens examinent en même temps des projets similaires liés à la compensation des paiements, des opérations de change et des opérations sur titres a fourni au secteur privé et aux pouvoirs publics un terrain de coopération fécond. La restructuration des systèmes de compensation et de règlement est une entreprise extrêmement complexe, compte tenu en partie des interdépendances qui existent entre les systèmes proposés. À titre d'exemple, on s'attend à ce que le système électronique de paiements, qui vise à soutenir la finalité des paiements, soit éventuellement utilisé pour le règlement net à la fois des opérations sur titres et des opérations de change dont la livraison s'effectue en dollars canadiens.

Le processus de restructuration comporte également certaines considérations importantes et complexes relevant de la politique des pouvoirs publics, sur lesquelles je vais maintenant me pencher.

La politique des pouvoirs publics doit tenir compte de quatre exigences principales, qui s'appliquent à chacun des trois projets de mécanisme de compensation et de règlement auxquels j'ai déjà fait allusion. Ce sont la réduction au minimum du risque systémique, la répartition appropriée des risques, l'équité en matière d'accès, et, finalement, la surveillance efficace de ces mécanismes. J'aimerais consacrer quelques minutes à chacune d'elles.

Contenir le risque systémique constitue la plus importante de ces exigences.

referred: first, the minimization of systemic risk; second, the appropriate distribution of risk; third, the maintenance of equitable access to these systems; and lastly, the effective supervisory oversight of the systems. I would like to spend a few moments on each of these requirements.

The most important public policy issue relates to containment of systemic risk. All the initiatives to which I have referred aim at reducing and containing risk within the particular clearing and settlement system, as well as increasing efficiency and reducing costs. But what if something went wrong? Any operational breakdown, liquidity problem or, worse still, a default, could affect all participants in the system, including participants that may not have had any involvement with the counterparty or counterparties that were at the source of the problem. It is not difficult to see that to put in place a clearing and settlement system that was not operationally and financially sound could well entail greater systemic risk than a decision not to set up any new system. That is why great attention needs to be paid to risk management implications when a system is being built.

The question of who should bear the risk of a default in any one of these systems has no simple answer. The degree of risk, if any, that is borne by the public sector, and hence the taxpayers, must be weighed carefully. The relevant authorities in many countries are increasingly reluctant to take on the risks inherent in these systems. In part this is because assumption of risk by the public sector can reduce the incentive for the systems to be designed by their users with sufficient built-in mechanisms and incentives to control risk. Clearly, if members do not bear a significant portion of the costs arising from the default of a participant, they will be tempted to engage in riskier behaviour than otherwise.

A related risk-sharing aspect, from a public policy perspective, is the need to determine the amount of securities, if any, that members would be permitted to pledge in order to protect the system if a participant were to default. For example, if financial institutions pledge securities to guarantee their performance in the system, this would in the event of a default effectively place an increased burden on the unsecured creditors of the failed institution. Those unsecured creditors could well include the

Tous les projets que je viens de mentionner visent à réduire et à limiter les risques que recèle un système de compensation et de règlement donné, tout en augmentant l'efficacité et en diminuant les coûts. Mais qu'arrive-t-il si quelque chose ne tourne pas rond? Un arrêt de fonctionnement, un problème de liquidité ou, pis encore, une faillite pourrait toucher tous les participants du système, y compris ceux qui n'ont eu aucun rapport avec la ou les contreparties à l'origine du problème. On constate sans peine que, si on mettait en place un système de compensation et de règlement ne reposant pas sur des bases opérationnelles et financières solides, le risque systémique auquel on s'exposerait pourrait bien être plus grand que si on décidait de ne pas instaurer un nouveau système. C'est pourquoi il importe d'être très attentif aux considérations de gestion du risque lors de l'élaboration d'un système de compensation et de règlement.

Il n'est pas facile d'établir qui doit assumer le risque en cas de faillite d'un participant à un des systèmes proposés. Le degré de risque, le cas échéant, qu'encourt le secteur public, partant le contribuable, doit être soupesé avec soin. Dans beaucoup de pays, les autorités compétentes hésitent de plus en plus à endosser les risques inhérents aux dispositifs de compensation. Cela tient en partie au fait que la prise en charge du risque par le secteur public peut réduire la motivation qu'auraient les usagers de concevoir des systèmes dotés de mécanismes internes et d'encouragements adéquats pour contrôler le risque. Il est clair que si les participants à la compensation n'assument pas une portion importante des coûts liés à la faillite de l'un d'eux, ils seront plus tentés d'entreprendre des opérations risquées qu'ils ne le seraient autrement.

Un aspect connexe de la question de la répartition des risques réside dans la nécessité de déterminer s'il y a lieu ou non de permettre aux participants de donner des titres en nantissement pour protéger le système en cas de faillite de l'un d'entre eux et, le cas échéant, d'en fixer le montant. Supposons que les institutions financières adhérentes engagent des titres pour garantir leur participation au système; en cas de faillite de l'une de ces institutions, une plus grande part de la perte serait effectivement portée par ceux de ses créanciers dont la créance n'est pas garantie. L'organisme d'assurance des dépôts pourrait bien être l'un d'eux. La question qui se pose donc aux responsables des politiques concerne le degré de recours au nantissement de titres qui pourra être autorisé. Les projets visant la mise en place des trois nouveaux systèmes de compensation et de règlement au Canada – soit le système de transfert de gros montants, celui de compensation des opérations sur devises et le système de compensation des titres de dette proposé par la CDS – prévoient tous un certain recours au nantissement de titres. Dans la mesure où cette pratique aide à réduire le risque systémique dans son ensemble, on pourrait considérer

provider of deposit insurance. The policy issue is the degree to which such pledging should be allowed. The proposals for the three new clearing and settlement systems in Canada – the LVTS, the foreign exchange netting scheme, and the CDS debt-clearing system – all provide for some pledging. To the extent that pledging helps reduce overall systemic risk, some increased burden on unsecured creditors in the event of a default could be considered acceptable. However, there are limits to the amount of pledging that should be allowed in any one system or overall, especially since some institutions can be expected to participate in all three proposed systems, as well as in systems in other countries.

This brings us to the question of who should participate in these systems. Access needs to be fairly open, since membership could affect an institution's ability to compete in the marketplace. Furthermore, broader membership would tend to increase market liquidity. However, access should not be so open as to undermine the system's integrity. The standards for participation should be fair and publicly known, but they should also be based on sound prudential standards, since all participants may have to share risk in one form or another.

The final public policy issue that I will comment on is the need for official oversight. Given the crucial role that these new netting systems will play in the financial system and indeed in the economy, official oversight is needed to ensure not only that these systems are set up appropriately but also that their operations continue to be sound. The federal government recognized this need when it established legislation creating the CPA in 1980. With respect to CDS this is an issue that now involves the joint efforts of CDS, the Office of the Superintendent of Financial Institutions and the various provincial securities commissions. There has been a lot of good co-operation.

Let me conclude by reiterating the major themes of my talk. Dramatic increases in transaction volumes and the rapid trend towards integration of financial markets – around the clock and on a global scale – have increased the chances that a problem occurring in one segment of the market could affect others. While such contagion effects have so far been contained, reviews of recent financial disturbances reveal that more serious problems

acceptable que les créanciers sans garantie aient à supporter une plus grande part de la perte en cas de faillite. Toutefois, le volume de titres déposés en garantie dans un système donné ou dans l'ensemble des systèmes ne doit pas dépasser certaines limites, surtout du fait qu'il est probable que certaines institutions participent aux trois systèmes proposés, ainsi qu'à des systèmes mis en place dans d'autres pays.

Reste à savoir qui devrait participer à ces systèmes. Il est nécessaire qu'ils soient assez accessibles, car le fait d'y adhérer pourrait influencer sur la compétitivité d'une institution sur les marchés. Par ailleurs, plus les systèmes compteront d'adhérents, plus ces marchés seront liquides. Toutefois, les nouveaux systèmes ne devront pas être accessibles au point où leur intégrité pourrait s'en trouver menacée. Les conditions d'entrée devront être équitables et connues du public, mais elles devront aussi reposer sur des normes prudentielles fiables, puisque tous les participants de ces systèmes pourraient être appelés à en partager le risque sous une forme ou sous une autre.

La dernière question de politique publique dont je vous entretiendrai aujourd'hui concerne la nécessité d'un suivi officiel. Étant donné le rôle fondamental que les nouveaux mécanismes de compensation joueront au sein du système financier et même dans l'ensemble de l'économie, il faudra qu'un suivi officiel soit exercé pour garantir non seulement que leur structure est bien conçue mais aussi que leur exploitation reste saine. Le gouvernement fédéral a reconnu cette nécessité en adoptant en 1980 la loi instituant l'ACP. Pour ce qui est du projet de la CDS, signalons qu'il mobilise à l'heure actuelle les efforts concertés de cette dernière, du Bureau du surintendant des institutions financières et de diverses commissions provinciales des valeurs mobilières. La coopération entre ces organismes a été intense et fructueuse.

Permettez-moi de revenir, en guise de conclusion, sur les principaux thèmes de mon allocution. Les hausses spectaculaires des volumes de transactions et l'évolution rapide vers l'intégration des marchés financiers – ceux-ci fonctionnant 24 heures par jour, à l'échelle mondiale – ont accru les risques qu'un problème survenant dans un secteur du marché se propage rapidement à d'autres secteurs. De tels effets de contagion ont pu être réprimés jusqu'à maintenant, mais l'analyse des récentes perturbations financières montre que des problèmes plus graves auraient bien pu se produire si les conditions générales avaient été moins favorables. Il est manifeste que nous devons aller de l'avant avec tous les projets dont je vous ai parlé aujourd'hui, à savoir l'immobilisation des titres; la réduction des décalages en matière de règlement des opérations sur titres; le renforcement des systèmes actuels de compensation et de règlement et la mise en place de nouveaux systèmes; la certitude de règlement et la finalité

might well have arisen had underlying conditions been less favourable. It is clear that we need to press on with all the initiatives that I have talked about today: immobilizing securities; reducing settlement lags in securities markets; strengthening existing clearing and settlement systems and establishing new ones; and achieving certainty of settlement and finality of payment. Besides reducing systemic risk, these improvements in the infrastructure of Canadian financial markets will increase efficiency and reduce costs. They are also necessary for competing in the global marketplace.

However, to realize these benefits, the schemes have to be sound from legal, operational and financial points of view. Designing a secure clearing and settlement system – whether for payments, securities or foreign exchange – is complicated and time consuming. We must take the time to ensure that each system is properly constructed and adequately safeguarded. This means ensuring, among other things, that the system provider and the participants have both the incentive and the capacity to manage and contain the risks they bear.

Finally, I encourage you to bear in mind that properly constructed systems of the kind I have talked about today are only a contribution to a sound and efficient financial system. The more traditional requirements still remain – namely, for an effective regulatory and supervisory structure, and for the highest quality of business and credit decision-making in the private sector.

de paiement. Outre une atténuation du risque systémique, ces améliorations à l'infrastructure des marchés financiers canadiens se traduiront par des gains d'efficacité et des réductions de coûts. Par ailleurs, elles sont nécessaires pour assurer la compétitivité de nos institutions sur les marchés mondiaux.

Toutefois, pour que se concrétisent les avantages que je viens de mentionner, les nouveaux mécanismes doivent reposer sur des fondements solides sur les plans juridique, opérationnel et financier. Concevoir un système de compensation et de règlement fiable – que ce soit pour les effets de paiement, les titres ou les opérations sur devises – est une tâche complexe et longue. Nous devons en effet lui consacrer assez de temps pour nous assurer que chaque système est convenablement édifié et doté d'une protection adéquate. Cela revient à dire qu'il nous faut vérifier, entre autres choses, si l'organisme responsable du système et les participants sont à la fois motivés pour gérer et contenir les risques auxquels ils s'exposent et sont capables de le faire.

J'aimerais, en dernier lieu, vous recommander de ne pas perdre de vue le fait que l'édification de systèmes solides du type dont il a été question aujourd'hui ne peut à elle seule assurer la santé du système financier. D'autres exigences, plus traditionnelles, doivent être maintenues, en ce sens qu'il faut conserver un cadre de réglementation et de surveillance efficace et veiller à ce que les décisions prises dans le secteur privé en matière de commerce et de crédit soient des plus judicieuses.

# Monetary policy: A Canadian perspective

# La politique monétaire : une perspective canadienne

*Remarks by John W. Crow  
Governor of the Bank of Canada  
to the Chamber of Commerce France-Canada  
Paris, France  
13 November 1990*

*Allocution prononcée par John W. Crow  
gouverneur de la Banque du Canada  
à la Chambre de commerce France-Canada  
Paris  
le 13 novembre 1990*

I am enormously pleased to have this opportunity to address you – especially since it is a première for the Bank of Canada that is long overdue.

How best to use the occasion? It seems an excellent one for commenting on the international economic scene more broadly than I would normally, before concluding with some particularly Canadian content.

A Canadian needs little excuse for taking an international perspective. We trade directly across two oceans, look immediately south to the largest economy in the world (Canada indeed is easily the United States' largest national trading partner, accounting for almost one-fifth of all U.S. merchandise trade), and Canada also reaches beyond to the Americas as a whole. In fulfilling its central responsibility, the design and conduct of monetary policy, the Bank of Canada is constantly made aware of the force of international economic and financial influences.

And indeed the present situation is very "international."

We are all affected by the Mid-East crisis and the fallout it is having in so many markets, besides of course its impact in the market for oil. Headlines are also being made by the miracles, transformations and strains in central and Eastern Europe. The rapid progress of the European Community captures the attention

Je suis très heureux de m'adresser à cette assemblée aujourd'hui, surtout qu'il s'agit d'une invitation à laquelle la Banque du Canada souhaite répondre depuis longtemps.

Comment tirer le meilleur parti d'une telle occasion si ce n'est en replaçant mes propos sur la scène économique internationale dans une perspective plus vaste que je ne le fais d'habitude. Je vous livrerai aussi, avant de conclure, quelques réflexions sur l'économie canadienne.

Rien n'est plus naturel pour un Canadien que de voir les choses dans une perspective internationale. Nos échanges commerciaux nous mettent en contact direct avec les pays d'outre-Atlantique et d'outre-Pacifique. Nous sommes bordés au sud par la plus vaste économie du monde, les États-Unis, dont nous sommes sans conteste parmi les pays du monde le plus important partenaire commercial, en ce sens que près du cinquième de leur commerce de marchandises se fait avec nous. Plus au sud s'étend le reste du continent américain, avec lequel nous avons aussi des échanges. C'est pourquoi la Banque du Canada ne perd jamais de vue la dynamique des influences économiques et financières internationales lorsqu'elle s'acquitte de sa responsabilité première, qui est d'élaborer et de mettre en oeuvre la politique monétaire.

Et, faut-il le rappeler, la situation actuelle a un caractère nettement « international ».

Nous sommes tous touchés par la crise du Golfe et par ses répercussions sur de nombreux marchés, outre bien sûr le marché du pétrole. Les miracles, les

and enthusiasm of more than just Europeans. And it is every country's business and responsibility to assure in the short time left, to the end of this year, that there will be a positive outcome to the Uruguay Round of world trade liberalization. Given the absolutely fundamental importance of open trade for world economic prosperity, this issue merits more headlines than it seems to receive.

All this being said, it is not my intention to focus so much on particular developments as on the contribution that monetary policy can make to ensuring that the particular outcomes are constructive.

Let me begin with a general observation about how monetary policy is viewed that is also somewhat of a criticism. Because the nature of monetary policy is not always well understood, it is often seen as a kind of residual policy that is capable of coping with many different problems – a handyman. Perhaps monetary policymakers should be flattered by this, but I believe they would be wise to resist the temptation. Better that they stick to the task to which monetary policy is best suited – that of seeking to provide a policy framework that provides monetary confidence. Let me give some examples of what I mean.

In Canada, admittedly in the face of differences in regional economic circumstances that sometimes can be rather wide, there has persisted a current of opinion that it would be desirable for Canadian monetary policy to be set regionally. However, the question as to whether this is indeed desirable is hardly relevant since it is not in fact possible. A country with a common currency and well-developed financial markets cannot have in any way levels of interest rates, or rates of monetary expansion, that would be systematically different in different regions or provinces. Neither of course will such differences be possible in a Europe that is truly unified in a monetary sense.

The same encouragement to have monetary policy reach in various directions shows up on the international scene. There, for example, one can witness a constant debate between those who view monetary policy as essentially concerned with monetary control and monetary stability, and those who reckon that it should be directed first and foremost at securing particular exchange rates or particular changes in exchange rates. This

transformations et les tensions que vivent les peuples de l'Europe centrale et de l'Europe de l'Est font les grands titres de l'actualité. Les Européens ne sont pas les seuls à être captivés et enthousiasmés par les progrès rapides que la Communauté européenne accomplit. Chaque pays a la responsabilité de veiller, dans le peu de temps qui reste avant la fin de l'année, à ce que les négociations de la ronde Uruguay sur la libéralisation du commerce international soient fructueuses. Compte tenu de l'importance capitale que revêt, pour la prospérité de l'économie mondiale, le libre-échange à l'échelle internationale, ces négociations devraient faire plus les manchettes.

Cela dit, je n'ai pas l'intention de m'attarder à des événements particuliers, mais plutôt à ce que la politique monétaire peut faire pour qu'ils aient une issue positive.

Ma première observation générale sur la manière dont est perçue la politique monétaire est aussi en quelque sorte une critique. Parce qu'elle n'est pas toujours bien comprise, la politique monétaire est souvent vue comme une politique résiduelle capable de régler une foule de problèmes, une politique en somme à laquelle on pourrait recourir dans toutes les situations. Peut-être les responsables de la politique monétaire devraient-ils en être flattés, mais à mon avis, il serait plus sage de leur part de résister à la tentation. Ils ont intérêt à se consacrer au rôle qui convient le mieux à la politique monétaire, celui de créer des conditions propres à favoriser la confiance dans la monnaie. Permettez-moi d'illustrer ma pensée de quelques exemples.

Au Canada, en raison de différences conjoncturelles qui, j'en conviens, sont parfois assez marquées entre les régions, certains persistent à réclamer que la politique monétaire soit régionalisée. La question de savoir si cela serait souhaitable ou non n'est guère pertinente, car il est impossible de régionaliser la politique monétaire. Un pays doté d'une seule unité monétaire et d'un réseau de marchés financiers bien développé ne saurait d'aucune manière pratiquer des taux d'intérêt différents ni avoir des rythmes d'expansion monétaire qui varieraient systématiquement selon la région ou la province. Il en sera de même ici, lorsque l'Europe sera véritablement unifiée sur le plan monétaire.

On observe sur la scène internationale le même appui en faveur d'une politique monétaire visant plusieurs objectifs. Il se manifeste, par exemple, dans le débat qui continue d'opposer ceux qui pensent que la politique monétaire devrait essentiellement s'attacher à contrôler et à stabiliser la monnaie et ceux qui estiment qu'elle devrait d'abord et avant tout viser à obtenir des niveaux déterminés ou des variations précises du taux de change. Ce débat soulève de nombreuses questions intéressantes, subtiles et importantes, je dirais. Mais il ne faut pas perdre de vue un point essentiel, à savoir que le fait d'axer la politique

debate gives rise to lots of interesting, subtle and, I must add, important, issues. But it is vital to retain one central point. That point is that focussing monetary policy on exchange rates and hoping that inflation will take care of itself is not, at the most general level, the place to start – not even for exchange rate stability.

Indeed, for stability in exchange markets for different currencies, experience indicates that the monetary authorities cannot provide a better basis than to ensure that various national monetary policies are directed at limiting monetary expansion to a non-inflationary pace. This promotes domestic price stability for each currency and thereby provides a consistent monetary basis for exchange rate stability. This would be the kind of stability underlying the phrase “stability-oriented monetary policies” in the communiqué of the G-7 group of major industrial countries, of which Canada and France are both members, that was issued in Washington at the end of September. The same basic idea was expressed by the Managing Director of the International Monetary Fund, Michel Camdessus, in his recent address to the Annual Meetings of the International Monetary Fund and the World Bank. He noted the importance for the international monetary system of a “low inflation club” among major industrial countries. We would all be well advised to be members of that club at least, and the key to entry is an anti-inflationary monetary policy.

What I have just said is testimony to the strength and credentials of the conviction that monetary policy really had better be anchored on preserving the value of money if it is going to make a lasting contribution to both national and international economic progress.

There are excellent reasons of principle why monetary policies should pursue price stability. We do after all have economies that depend crucially on money and monetary exchange, and monetary policy, as well as other economic policies, should strive to provide confidence in the future. But what has probably been more compelling than arguments from basic principles in generating support for stability-oriented monetary policies has been practical experience. We have learned, often painfully, that other ways of applying monetary policy manifestly contribute to economic and social disappointment.

monétaire sur le taux de change dans l'espoir que le problème de l'inflation se résoudra de lui-même ne constitue pas, sur un plan très général, un bon point de départ, même si le but visé est la stabilité du taux de change.

De fait, nous savons par expérience que c'est en orientant leurs politiques de manière à favoriser un rythme d'expansion monétaire non inflationniste que les autorités monétaires peuvent le mieux soutenir la stabilité des diverses monnaies sur les marchés des changes. De telles politiques ont la vertu de promouvoir la stabilité des prix intérieurs et, ce faisant, procurent une solide base à la stabilité des taux de change. Il s'agit là de la stabilité à laquelle fait référence l'expression « politique monétaire axée sur la stabilité » qu'on trouve dans le communiqué publié fin septembre à Washington par le Groupe des sept grands pays industriels, dont font partie le Canada et la France. C'est au fond la même idée qu'exprimait Michel Camdessus, directeur général du Fonds monétaire international, dans l'allocution qu'il prononçait aux assemblées annuelles de cet organisme et de la Banque mondiale. Il y soulignait en effet l'importance, pour le système monétaire international, de l'existence d'un « club des pays à faible inflation » parmi les grands pays industriels. Nous aurions tous intérêt à faire partie au moins de ce club-là, et le meilleur moyen d'y parvenir est de mettre en oeuvre une politique monétaire anti-inflationniste.

Ces quelques observations attestent le poids et le bien-fondé de l'opinion qu'il vaut mieux, si l'on veut que la politique monétaire contribue de façon durable à la croissance de l'économie nationale et internationale, l'axer sur le maintien de la valeur de la monnaie.

De solides principes de base justifient la mise en oeuvre de politiques monétaires axées sur la stabilité des prix. Comme, en définitive, nos économies dépendent toutes essentiellement de la monnaie et des échanges monétaires, les politiques monétaires, de même que les autres politiques économiques que nous suivons, devraient s'attacher à instaurer la confiance dans l'avenir. Mais encore plus que les principes de base, c'est l'expérience vécue qui nous incite à accorder notre appui aux politiques monétaires axées sur la stabilité des prix. En effet, nous avons appris, souvent à nos dépens, qu'une politique monétaire orientée dans une autre voie n'apporte que déception, tant sur le plan social que sur le plan économique.

L'expérience vécue par les pays latino-américains démontre, de façon extrême peut-être, que les politiques inflationnistes mènent à une impasse. De fait, non seulement elles mènent à une impasse, mais encore elles sapent l'économie. L'histoire nous apprend également que l'inflation nous entraîne sur un terrain glissant. Je veux dire par là qu'une économie prise dans une spirale inflationniste éprouve beaucoup de difficulté à s'en sortir. Même si elle y

The Latin American experience with inflation demonstrates, perhaps in an extreme way, that inflationary policies are a dead end. Indeed they are worse than a dead end, they are economically destructive. That experience also demonstrates that the inflation slope is a very slippery one. That is to say, once an economy is caught up in an inflation spiral it finds it very difficult indeed to extricate itself. Even when it does extricate itself *de facto*, the monetary authorities have to convince those still holding its money that they will show sufficient determination not to subject the economy to inflationary policies again, and this will take even longer. And all this time, the lingering risk in people's minds of a repeat bout of inflation will push interest rates higher than they need to be. This is further reason why it is better not to get caught in the inflation trap in the first place. I should perhaps add that I am of course aware that fiscal policy can often have a great responsibility in this matter.

Coming closer to home, the experience of the industrial nations in the 1970s also made it very clear that monetary policies that were not addressed promptly to fighting inflation only made matters worse for their economies. The first oil shock, which hit in late 1973, came on top of a demand situation in industrial countries that was already inflationary. And even then, monetary policies were slow to react and give a clear anti-inflationary message. However, some countries, notably Germany and Japan, learned the lesson faster than others and demonstrated that firm anti-inflationary policies, spearheaded by monetary policy, paid major dividends in terms of economic performance in subsequent years.

This lesson provided by the 1970s goes part way in explaining why the economic expansion that the world has enjoyed since the early 1980s has been so well sustained. Throughout this period, monetary policies of the main industrial countries have above all given weight to the need to resist inflation and thus provide this vital underpinning of confidence to planning and decisions.

And bringing the narrative up to the present, the bad experience of the 1970s also explains why the economic response to the recent oil price outbreak has generally been so different from what happened after 1973.

parvient effectivement, il reste aux autorités monétaires du pays à convaincre ceux qui continuent à détenir sa monnaie qu'elles sont déterminées à ne pas recourir de nouveau à des politiques inflationnistes. Et cela prend plus de temps encore. Dans l'intervalle, les craintes d'une nouvelle flambée des prix qui subsistent dans l'esprit des gens vont pousser les taux d'intérêt à des niveaux plus élevés que la situation ne le justifie. Voilà une autre raison pour laquelle il vaut mieux au départ ne pas tomber dans le piège de l'inflation. Soit dit en passant, je suis bien conscient que les politiques budgétaires peuvent souvent jouer un rôle important à ce chapitre.

Plus près de nous, l'expérience vécue par les nations industrielles au cours des années 70 a aussi clairement démontré à quel point la situation économique d'un pays s'aggrave lorsque sa politique monétaire ne s'engage pas rapidement dans la lutte contre l'inflation. Le premier choc pétrolier, qui s'est produit fin 1973, est venu exacerber dans les pays industriels une conjoncture où la demande était déjà inflationniste. Et même à ce moment, les politiques monétaires ont été lentes à réagir et à transmettre un message anti-inflationniste non équivoque. Toutefois, certains pays comme l'Allemagne et le Japon ont tiré plus vite que d'autres les enseignements qui s'imposaient. Ils ont prouvé que l'application de politiques anti-inflationnistes vigoureuses, avec en fer de lance la politique monétaire, se traduisait par des gains économiques pour les années à venir.

C'est en partie grâce aux enseignements tirés de l'expérience des années 70 que l'expansion économique qui s'est manifestée de par le monde depuis le début des années 80 a été si soutenue. En effet, pendant toute cette période, les politiques monétaires des principaux pays industriels ont été essentiellement axées sur la nécessité de contrer l'inflation afin d'instaurer la confiance dont les agents économiques ont besoin pour planifier et prendre leurs décisions.

La dure leçon des années 70 explique également pourquoi la réaction générale à la récente flambée des prix du pétrole a été bien différente de celle qui a suivi le choc pétrolier de 1973.

En effet, contrairement à ce qu'on pensait alors, on admet généralement maintenant que l'approche la plus sage, car la plus efficace à long terme, est de laisser les augmentations du cours mondial du pétrole se répercuter directement sur les prix intérieurs de ce produit et sur le coût des produits finis. La plupart des pays ne tenteront donc pas d'atténuer, ni d'empêcher, à l'aide de subventions par exemple, la transmission des hausses enregistrées, comme beaucoup l'ont fait dans les années 70. Les interventions de ce genre engendrent la confusion et vont à l'encontre du but recherché; qui plus est, elles sont onéreuses pour le

Unlike then, it is now broadly accepted that by far the wiser course, because it is ultimately more effective, is to let increases in world oil prices flow through directly to the domestic price of oil and the costs of the final products. This means that countries will generally avoid attempts to control, or otherwise suppress, for example through subsidies, the ultimate pass-through of oil price increases, as was often the case in the 1970s. Such suppression is confusing and counterproductive. It is costly to the taxpayer, and impedes conservation and the efficient use of energy generally.

But at the same time, the monetary authorities need to demonstrate with clarity and determination that they are also going to resist any upward push to general inflation because of the disturbances coming through oil prices. It is not possible to avoid blips in domestic prices. But these could easily turn into an inflationary spiral if, in response to the oil-induced increase in consumer prices, there were increases in income demands, which in turn fed back into consumer prices, and so on. In this way, the hot potato of higher oil prices would be passed around the domestic cost-price system indefinitely, with the inflationary impact becoming more widespread with each pass. Monetary policy should not allow that to happen. Such an inflationary spiral would only nourish monetary instability, with bad results for economic performance.

As a final observation on the international side, let me note that the extent to which interest rates might come under upward pressure in the current environment depends on a whole series of factors. Besides the initial upward effects stemming from the inflation and uncertainty generated by the disturbances to oil prices, important pressures are being placed on available savings by the strong domestic spending in Japan and by the economic reform and restructuring that is taking place in Europe from Germany eastward. Those forces have already exerted upward pressure on long-term interest rates in Japan and Germany and, of course, this has spilled over into world capital markets. In contrast, there is in North America and the United Kingdom evidence of slowing in domestic spending. This can be an important offset, as of course can actions to hold down or to reduce fiscal deficits in all the industrialized countries.

contribuable et entravent la conservation et l'utilisation efficiente des ressources énergétiques en général.

Cependant, les autorités monétaires doivent également se montrer fermement résolues à contrer toute poussée à la hausse du niveau général d'inflation résultant des perturbations dues au renchérissement du pétrole. Il est impossible d'éviter les à-coups dans le rythme d'évolution des prix intérieurs. Mais de tels mouvements peuvent facilement ouvrir la voie à une spirale inflationniste si, face à l'augmentation des prix à la consommation due à la cherté du pétrole, les exigences des gens en matière de revenu s'intensifient, car à leur tour celles-ci se refléteraient sur le niveau des prix à la consommation, et ainsi de suite. L'augmentation du cours du pétrole se répercuterait ainsi indéfiniment sur les prix et les coûts intérieurs, et son effet inflationniste deviendrait de plus en plus généralisé. Les autorités monétaires ne doivent pas laisser une telle spirale se développer; toute autre approche donnerait lieu à de l'instabilité monétaire, ce dont l'économie pâtirait.

Pour clore mes observations sur la conjoncture internationale, j'aimerais souligner que l'intensité des pressions à la hausse qui pourraient s'exercer sur les taux d'intérêt dans le contexte actuel dépend d'une foule de facteurs. Mises à part les premières poussées attribuables à l'inflation et à l'incertitude causées par le renchérissement du pétrole, on observe de fortes pressions sur l'épargne disponible dues à la vigueur de la dépense intérieure au Japon ainsi qu'aux réformes et à la restructuration économiques en cours en Allemagne et en Europe de l'Est. De fait, des pressions à la hausse s'exercent déjà sur les taux d'intérêt à long terme au Japon et en Allemagne et, bien sûr, ce mouvement s'est répercuté sur les marchés de capitaux un peu partout dans le monde. Mais les forces à l'oeuvre pourraient être contrebalancées par le ralentissement de la dépense intérieure observé en Amérique du Nord et au Royaume-Uni et par les mesures que l'ensemble des pays industrialisés pourraient adopter afin de contenir ou de réduire leurs déficits budgétaires.

Les autorités monétaires n'ont ni le pouvoir d'augmenter l'épargne nationale ni celui de modifier l'offre de pétrole. Ce qu'elles peuvent faire toutefois, à l'aide de la politique monétaire, pour atténuer les pressions à la hausse qui s'exercent sur les taux d'intérêt et pour faire baisser ces taux de façon durable, c'est d'instaurer la confiance dans la valeur future de la monnaie. Pour cela, elles doivent limiter le rythme de croissance de la masse monétaire.

Permettez-moi maintenant de vous entretenir de la conjoncture économique canadienne telle que nous la voyons à la Banque du Canada.

La demande a enregistré au cours des dernières années une expansion

Monetary policy cannot increase national savings or change the supply of oil. What can be done through monetary policy to limit upward pressure on interest rates or bring them down in a durable way is to provide confidence in the future value of money by limiting the rate at which the supply of money expands.

Let me continue with some words on the Canadian scene, as viewed from the Bank of Canada's perspective.

In recent years, the Canadian economy has undergone a remarkably strong expansion in demand. Total spending in Canada in the three years 1987-89 rose appreciably faster than in the United States, for example, and in fact more rapidly than for the G-7 group of countries as a whole. Strong commodity prices, vigorous growth in investment (in fact, real fixed investment spending took up a record share of total demand in Canada in this period) and buoyant consumption based on rapid job creation, all contributed to this surge. But with the inevitable squeeze on productive capacity, inflation began to pick up.

The Bank of Canada consistently provided strong resistance to these pressures and was relatively prompt in doing so. In this environment of strong demand, short-term interest rates rose from around 7 per cent at the beginning of 1987 to over 13 per cent in the spring of 1990, with a temporary easing for a few months after the 1987 stock market crash. Furthermore, the spread of Canadian short-term interest rates over those in the United States tended to widen from the spring of 1989 as U.S. rates eased.

While Canadian monetary policy has no exchange rate objective as such, this widening of spreads at the short end of the market did provide, as a by-product, a measure of support for the Canadian dollar against the U.S. dollar. But it is also worth noting that the bulk of the recent appreciation of the Canadian dollar took place between 1987 and the spring of 1989. That is, it occurred before the widening of interest rate differentials vis-à-vis the United States. This earlier appreciation cannot therefore be directly attributed to monetary policy, but must rather have stemmed from such non-monetary factors as the extraordinary boom in our commodity exports.

In 1990 the advance of money and credit, and of dollar spending, in Canada has, finally, slowed to a less inflationary pace. Furthermore, capacity pressures in the Canadian economy

remarquablement forte au Canada. De 1987 à 1989, la dépense totale s'est accrue nettement plus vite chez nous qu'aux États-Unis et plus vite aussi que dans l'ensemble des pays du Groupe des sept. Cette poussée de la dépense est attribuable, entre autres, aux cours élevés des produits de base, à la vigueur de la consommation – qui a été soutenue par la croissance rapide de l'emploi – ainsi qu'au dynamisme des investissements (en fait, les investissements fixes n'avaient encore jamais représenté, en termes réels, une part aussi importante de la dépense globale). Mais, comme il fallait s'y attendre, des tensions se sont manifestées dans l'appareil de production, relançant ainsi l'inflation.

La Banque du Canada a systématiquement et assez rapidement opposé une forte résistance à ces pressions. La demande étant vigoureuse, les taux d'intérêt à court terme se sont inscrits en hausse, sauf pendant les quelques mois qui ont suivi le krach boursier de 1987, passant d'environ 7 % au début de 1987 à plus de 13 % au printemps de 1990. En outre, l'écart entre les taux d'intérêt à court terme canadiens et leurs pendants américains a eu tendance à se creuser à partir du printemps de 1989, à mesure que les taux d'intérêt baissaient aux États-Unis.

Même si la politique monétaire canadienne ne vise pas vraiment un taux de change précis, il reste que cet élargissement de l'écart entre les taux à court terme dans les deux pays a permis au dollar canadien de se raffermir par rapport au dollar américain. Je tiens cependant à souligner que le dollar canadien s'est surtout apprécié entre 1987 et le printemps de 1989, soit avant que l'écart entre les taux d'intérêt ne commence à s'agrandir. Cette appréciation ne peut donc être directement attribuée à la politique monétaire; elle dériverait plutôt de facteurs non monétaires tels que l'extraordinaire montée en flèche de nos exportations de produits de base.

Cette année, les agrégats de la monnaie et du crédit ainsi que la dépense nominale progressent enfin à un rythme moins inflationniste au Canada. Les tensions ont également commencé à se relâcher au sein de l'appareil de production. L'ampleur du relâchement dépendra évidemment en partie de la façon dont les forces inflationnistes d'origine interne réagiront à la nouvelle conjoncture économique. Tout ce que nous savons à cette étape-ci, c'est qu'une réaction, bien que lente et imprécise, est en train de se dessiner.

Il est très important bien sûr que les coûts intérieurs soient sensibles à la nouvelle conjoncture, surtout face aux pressions inflationnistes qu'engendre la hausse du cours du pétrole, et en particulier si nous souhaitons voir les taux d'intérêt baisser de façon durable. Le Canada est un pays riche en ressources énergétiques et il se trouve d'une certaine façon favorisé par la situation actuelle de l'offre et de la demande de pétrole. Mais cet avantage est purement relatif. Le monde entier subit les effets négatifs du choc pétrolier et, même si les

have slackened. The extent to which they slacken will obviously depend in part on how responsive domestic inflationary forces are to the changed economic conditions. At this stage the evidence is that the response, while not rapid or clear-cut, may at least be beginning.

It is of course very important for this response from the side of domestic costs to occur, particularly in view of the adverse inflation pressure from oil prices, and particularly, I must add, if interest rates are to ease in a lasting way. Canada, as an energy-rich country, is in one way better off because of the oil demand-supply situation. But this windfall is only relative to the situation of other major industrial countries. The world as a whole is undergoing an adverse supply shock, and while Canadians may be better off than others it does not at all follow that Canadians are better off in absolute terms. In any event, energy prices for Canadian consumers are, as elsewhere, moving up. Those increases will have to be absorbed without unleashing an inflationary spiral. This presents an obvious challenge for Canadian monetary policy, as it does for policies elsewhere.

In moving to a conclusion, I must recognize that this review of the economic scene has, unavoidably, brought into relief uncertainties and complications. And it hardly needs emphasizing that they face us on whichever side of the Atlantic (or the Pacific for that matter) we happen to be.

Public policy has to rise to the challenge. Because of these uncertainties it is all the more vital that monetary policy should stick to the kind of path that provides assurance of monetary stability. As I indicated earlier, the other ways of conducting monetary policy – essentially, being tolerant of inflation – end up creating more problems than they can hope to solve. There are indeed many economic problems that monetary policy cannot solve, but it must avoid compounding those problems and creating new ones. Monetary policy, as well as other public policies, must provide confidence in a sound economic future.

Canadiens sont mieux placés que d'autres, cela ne signifie aucunement qu'ils sont en meilleure posture dans l'absolu. De toute façon, ils doivent, comme tout le monde, payer de plus en plus cher l'énergie qu'ils consomment, et ces hausses de prix doivent être absorbées sans déclencher de spirale inflationniste. C'est évidemment là que réside le défi que doit relever la politique monétaire, au Canada comme ailleurs.

Je dois admettre, avant de conclure, que le survol que je viens de faire de la scène économique a fait ressortir les incertitudes et les complications auxquelles, est-il besoin de le souligner, nous faisons tous face, quel que soit le côté de l'Atlantique (ou du Pacifique) où nous nous trouvons.

Les pouvoirs publics doivent se montrer à la hauteur de la situation. À cause de toutes ces incertitudes, il est encore plus important que la politique monétaire ne s'écarte pas de la voie qui mène à la stabilité des prix. Comme je l'ai dit tout à l'heure, toute autre approche – surtout celle qui consiste à s'accommoder de l'inflation – finit par créer plus de problèmes qu'elle ne pourra jamais en résoudre. Même si la politique monétaire ne peut rien face à bien des problèmes d'ordre économique, elle doit éviter de les aggraver et d'en créer de nouveaux. Tout comme d'autres politiques des pouvoirs publics, la politique monétaire doit viser à asseoir la confiance dans un avenir économique sain.

# Introductory statement by John W. Crow Governor of the Bank of Canada

*before the Standing Committee on Finance  
Thursday, 18 October 1990*

Mr. Chairman, I welcome this opportunity to explain monetary policy and respond to the questions of your Committee.

The Bank of Canada implements monetary policy on the basis of a carefully thought-out framework. At its heart is the goal of providing Canadians with a money that can be trusted, a currency that can be counted on to retain its value. This goal is not important as an end in itself, but is the essential contribution that monetary policy can make to sustained economic progress. We have a market economy, for which the institution of money and monetary exchange is fundamental. Allowing inflation to undermine that institution, to make our money less trustworthy, can only make our economy less productive, less prosperous and less fair.

In securing a trustworthy monetary standard, the Bank of Canada seeks to encourage the development over time of a rate of growth of money and credit consistent with monetary stability as the best contribution monetary policy can make to sustained growth in the economy. This is frequently, and incorrectly, referred to as a "high interest rate" policy. In reality, the very opposite is true, since achieving a non-inflationary environment brings about durably low interest rates. In such an environment, savers do not have to seek high interest rates to compensate for future losses in the value of money.

There are a number of factors, including Bank of Canada

# Remarques préliminaires de John W. Crow Gouverneur de la Banque du Canada

*devant le Comité permanent des finances  
le jeudi 18 octobre 1990*

Je suis heureux, Monsieur le Président, de l'occasion qui m'est offerte de vous entretenir de la politique monétaire et de répondre aux questions des membres de votre comité.

La Banque du Canada formule sa politique monétaire en fonction d'un cadre soigneusement défini, dont l'objectif central est de donner aux Canadiens une monnaie qui puisse leur inspirer confiance, une monnaie qu'ils croient devoir conserver sa valeur. Cet objectif ne constitue pas une fin en soi, mais représente plutôt la contribution essentielle que la politique monétaire peut apporter à la croissance soutenue de notre économie. Nous vivons dans une économie de marché, fondée sur la monnaie et sur les échanges monétaires. Si nous laissons l'inflation miner ce fondement, si nous la laissons nuire à la fiabilité de notre monnaie, l'économie canadienne deviendra forcément moins productive, moins prospère et moins équitable.

Pour assurer la fiabilité de l'unité monétaire, la Banque du Canada cherche à favoriser au fil du temps un rythme d'expansion de la monnaie et du crédit qui soit compatible avec la stabilité monétaire. Il s'agit là de la meilleure contribution que la politique monétaire puisse apporter à la croissance soutenue de notre économie. Cette démarche est souvent taxée, à tort, de politique de « taux d'intérêt élevés ». En réalité, c'est tout à fait l'inverse qui est vrai, puisque la réalisation d'un climat non inflationniste mène à des taux d'intérêt bas et qui le restent de façon durable. En effet, dans un tel climat, les épargnants n'ont pas à rechercher des taux de rémunération élevés pour leurs placements dans le but de se protéger contre les risques d'érosion de la valeur de la monnaie.

operations, that influence interest rates in the economy. But whatever influence the Bank of Canada has over the range of interest rates in the marketplace depends very much on the credibility of its actions. In particular, if interest rates are to be guided down so that they stay down, then our actions must be viewed by savers and borrowers as consistent with an improving inflation outlook. Trying to force down short-term interest rates by pushing up central bank liquidity could well have the opposite effect on longer-term rates, particularly if that inflation outlook is fragile.

Even if the framework of monetary policy does not change, the economic and financial environment in which monetary policy is conducted does change.

Rapid increases in dollar spending in the Canadian economy over the past several years – 30 per cent over the three years 1987-89 for example – and the resulting high level of demand relative to the capacity of our economy to supply goods and services put accelerating upward pressure on prices and costs. It is clear that the situation is now changing. Demand in the economy has fallen back from the unsustainably high levels of last year.

At least from the side of demand, pressures on inflation have become less intense. Short-term interest rates have declined in recent months by about one and one-half percentage points. Given the change in economic conditions, this change in interest rates was consistent with a monetary policy framework oriented in the direction of price stability.

I realize, Mr. Chairman, that many would like to have seen much larger reductions in interest rates than have occurred. However, the present turbulent situation, with so many uncertainties, calls for particular caution in monetary policy actions.

It should not be forgotten that inflation pressures built up in Canada over a period of years, and concerns about continuing, even worsening, inflation have accumulated. Accordingly, the momentum that had so clearly developed in inflation has been slow to reverse.

There are other factors at work as well. One that has emerged recently is the crisis in the Middle East and related developments in the international oil market. Canada's earlier experience with

Un certain nombre de facteurs, dont les opérations de la Banque du Canada, influencent le comportement des taux d'intérêt. Mais l'influence que la Banque du Canada exerce sur les divers taux qui sont pratiqués sur le marché est très fortement tributaire de la crédibilité des mesures qu'elle prend. Ainsi, pour que les taux d'intérêt puissent être réduits et rester bas, les opérations de la Banque du Canada doivent être perçues par les épargnants et par les emprunteurs comme étant compatibles avec une amélioration sur le front de l'inflation. Tenter de forcer à la baisse les taux d'intérêt à court terme en injectant davantage de liquidités dans le système pourrait bien produire l'effet contraire sur les taux à plus long terme, surtout si l'évolution de l'inflation est incertaine.

Même si le cadre de la politique monétaire ne varie pas, le climat économique et financier dans lequel cette dernière est mise en oeuvre, quant à lui, évolue.

Les hausses rapides enregistrées par le taux de croissance de la dépense nominale au Canada durant ces dernières années – 30 % par exemple, de 1987 à 1989 – et la vigueur de la demande par rapport à la capacité de l'économie de fournir des biens et des services qui en a résulté ont provoqué une accentuation des pressions à la hausse sur les prix et sur les coûts. Il est manifeste que cette situation est en train de changer. La demande a fléchi par rapport aux niveaux insoutenables atteints l'année dernière.

Les pressions sur l'inflation, du moins celles attribuables à la demande, se sont atténuées. Au cours des derniers mois, les taux d'intérêt à court terme ont baissé d'environ un point et demi de pourcentage. Compte tenu de l'évolution de la conjoncture économique, ce mouvement des taux d'intérêt était compatible avec une politique monétaire orientée dans la voie de la stabilité des prix.

Je me rends bien compte, Monsieur le Président, que beaucoup de gens auraient souhaité que les taux d'intérêt baissent beaucoup plus qu'ils ne l'ont fait. Toutefois, la conjoncture actuelle, marquée par l'instabilité et par tant d'incertitudes, exige des autorités monétaires qu'elles fassent preuve d'une circonspection particulière.

Il ne faut pas perdre de vue le fait que les pressions inflationnistes se sont accumulées au Canada pendant un certain nombre d'années et que les craintes que l'inflation perdure, ou même s'aggrave, se sont multipliées. Aussi, l'élan qu'avait manifestement pris l'inflation ne s'est-il inversé que lentement.

D'autres facteurs font également sentir leur effet, par exemple, la crise qui a éclaté dernièrement au Moyen-Orient et ses répercussions sur le marché mondial du pétrole. Au Canada, nous savons d'expérience qu'une accélération rapide du cours du pétrole peut constituer une importante source de pressions inflationnistes.

rapid oil price increases indicates that they can be a significant source of inflation pressures.

It is not possible to avoid blips in prices, but monetary policy must encourage people to take economic decisions on the basis that inflation will decline over time, and not the reverse. It is imperative that we achieve gradual but progressive reductions in inflation if confidence in the value of our money is to be preserved.

One final point, Mr. Chairman. What monetary policy contributes will not be everything that can be done through public policy for sustained economic progress. Analysis as to how other policies could be improved to help create a less inflationary economy is of course very helpful. At the same time, monetary policy must deal with the world as it is, not as it might be in some possibly better set of circumstances. Furthermore, there is no reason to believe circumstances would be better if monetary policy were to become inflationary.

Les à-coups dans le rythme d'évolution des prix ne peuvent être évités; toutefois, la politique monétaire doit inciter les gens à fonder leurs décisions économiques sur l'hypothèse que l'inflation baissera progressivement au fil du temps et non qu'elle augmentera. Il est capital que nous réalisions une baisse graduelle mais constante du taux d'inflation pour que la confiance à l'égard de la valeur de la monnaie soit préservée.

Permettez-moi, Monsieur le Président, de faire une dernière observation. La politique monétaire n'est pas la seule politique des pouvoirs publics qui puisse encourager la croissance soutenue de notre économie. Il ne fait aucun doute qu'il est utile d'examiner comment d'autres politiques pourraient être améliorées afin de contribuer à la création de conditions économiques moins inflationnistes. Il faut aussi signaler que la politique monétaire doit composer avec le monde tel qu'il est dans la réalité et non pas tel qu'il pourrait être dans des circonstances peut-être plus favorables. D'ailleurs, il n'y a pas lieu de croire que les circonstances deviendraient plus favorables si la politique monétaire prenait une orientation inflationniste.

# Minutes of Bank of Canada Board of Directors' meeting

# Procès-verbaux des réunions du Conseil d'administration de la Banque du Canada

*Extracts from the minutes of the meeting of the Board of Directors held on 7 September 1990*

*Extraits du procès-verbal de la réunion du Conseil d'administration tenue le 7 septembre 1990*

## ECONOMIC AND FINANCIAL CONDITIONS AND MONETARY POLICY

Senior staff members joined the meeting and, on the basis of the notes attached to these minutes, commented on economic and financial developments since the previous meeting.

### Governor's remarks

The Governor opened his remarks by noting that since the last Board of Directors' meeting on 26 June there had been several developments in the economic and financial situation that were particularly important from the perspective of monetary policy.

First, the ending of the constitutional discussions that had made headlines in May and June brought an easing in the uncertainty and volatility that had been a feature of money, bond and exchange markets during that earlier period. The exchange value of the Canadian dollar rose against the U.S. dollar in the period immediately after the discussions ended, and the Canadian bond market rallied in late June, leading to a decline in long-term interest rates.

Second, there were further signs that the pressures of spending demands on the supply capacity of the Canadian economy had eased following the long period of strong expansion in demand. This was evident, for example, from the recently released data showing a decline in the gross domestic product for the second quarter of 1990, and from the upward movements in the rate of

## L'ÉVOLUTION DE LA SITUATION ÉCONOMIQUE ET FINANCIÈRE ET LA POLITIQUE MONÉTAIRE

Des cadres supérieurs de la Banque se joignent aux membres du Conseil et, en s'inspirant des notes jointes au présent procès-verbal, ils font part de leurs observations sur l'évolution de la situation économique et financière depuis la dernière réunion.

### Observations du gouverneur

Le gouverneur fait d'abord remarquer que, depuis la dernière réunion du Conseil d'administration tenue le 26 juin dernier, plusieurs facteurs d'une importance particulière pour la politique monétaire sont apparus sur la scène économique et financière.

Tout d'abord, les discussions constitutionnelles qui avaient fait les manchettes en mai et en juin ayant pris fin, la volatilité et l'incertitude qui caractérisaient le marché monétaire, le marché obligataire et le marché des changes durant ces deux mois se sont atténuées. Le taux de change du dollar canadien s'est apprécié par rapport au dollar É.-U. au cours de la période qui a suivi immédiatement la fin de ces discussions, et le marché obligataire canadien s'est raffermi à la fin juin, favorisant ainsi une baisse des taux d'intérêt à long terme.

D'autre part, après la longue période de croissance soutenue de la demande, les pressions que celle-ci exerçait sur l'appareil de production canadien ont de nouveau semblé se relâcher. Ce relâchement s'est manifesté, entre autres, par le recul qu'a accusé le produit intérieur brut au deuxième trimestre de 1990, selon des données publiées récemment, et par le mouvement à la hausse que le taux de chômage a affiché en juillet et en août. L'évolution des agrégats de la monnaie et du crédit, que la Banque du Canada suit de près, a également donné des signes de détente. Ces derniers

unemployment in July and August. Indications of easing were also present in the money and credit aggregates monitored by the Bank. The rate of increase in the monetary aggregate M2 had been weak in recent months, although it rebounded sharply in August. The pace of advance in household credit had slowed significantly since the beginning of the year.

Finally, since early August there had been considerable uncertainty generated by the crisis in the Middle East and related developments in the international oil market. Longer-term interest rates rose internationally. The Canadian dollar rose sharply against the U.S. dollar in the weeks immediately following the 2 August invasion, despite narrower spreads across the maturity spectrum of the two countries' interest rates. This was to some extent the result of a perception that Canada, having abundant energy resources, was relatively favoured by higher oil prices. However, the Canadian dollar reversed itself in late August and early September.

The Governor emphasized that while monetary conditions had shifted in the current economic environment, there was no change in the underlying objective of monetary policy. Monetary policy was aimed at resisting inflation and, furthermore, at encouraging businesses and individuals to base their economic decisions on the prospect of declining inflation. Sustained easing of conditions in financial markets could only come about in a climate of improving underlying inflation. In view of the moderating pressures on inflation from the side of demand, there had in fact been some scope for a gradual decline in short-term interest rates. On a cumulative basis, that decline in rates had amounted to about one percentage point since the last Board meeting. In mid-August there was a general reduction in the prime lending rate of commercial banks of one-half of a percentage point.

The Governor also pointed out that, although progress had been made in providing a solid base for non-inflationary growth, there were some factors in the period ahead, particularly the rise in the price of oil and the initial direct effect of the proposed goods and services tax, that would lead to a jump in the consumer price index. He emphasized that monetary policy would have to guard against the risk that this jump in consumer prices might trigger an inflationary, and self-defeating, round of compensating increases in incomes and prices.

mois, le taux de croissance de l'agrégat monétaire M2 était faible, même s'il s'est redressé fortement en août. Et le rythme de progression du crédit aux ménages a sensiblement ralenti depuis le début de l'année.

Enfin, depuis le commencement du mois d'août, la crise au Moyen-Orient et ses répercussions sur le marché mondial du pétrole ont suscité beaucoup d'incertitude. Les taux d'intérêt à long terme ont connu une hausse partout dans le monde. Le dollar canadien s'est nettement apprécié par rapport au dollar É.-U. au cours des semaines qui ont immédiatement suivi l'invasion du 2 août, malgré un rétrécissement des écarts entre les taux d'intérêt pratiqués dans ces deux pays, et ce, pour l'ensemble des échéances. Cette évolution est attribuable dans une certaine mesure au fait que le Canada, pays doté d'abondantes ressources naturelles, est perçu comme étant relativement favorisé par une hausse du prix du pétrole. Cependant, le dollar canadien a de nouveau fléchi par rapport à la devise américaine à la fin du mois d'août et au début de septembre.

Le gouverneur insiste sur le fait que, même si les conditions monétaires se sont modifiées sous l'influence du climat économique actuel, l'objectif fondamental de la politique monétaire, lui, n'a pas changé. La politique monétaire a pour but de juguler l'inflation et vise en outre à inciter les entreprises et les particuliers à baser leurs décisions économiques sur la perspective d'une baisse de l'inflation. En effet, un assouplissement soutenu des conditions sur les marchés financiers ne peut se produire que si le taux d'inflation tendanciel diminue. Le relâchement des pressions que la demande exerce sur l'inflation a permis en fait un certain recul graduel des taux d'intérêt à court terme. Au total, les taux d'intérêt ont baissé d'environ un point de pourcentage depuis la dernière réunion du Conseil d'administration. À la mi-août, les banques commerciales ont généralement abaissé le taux de base de leurs prêts d'un demi-point de pourcentage.

Le gouverneur mentionne également que, malgré les progrès accomplis dans l'établissement de bases solides sur lesquelles asseoir une croissance non inflationniste, certains facteurs, notamment la hausse du prix du pétrole et l'incidence directe qu'aurait initialement la taxe sur les produits et services, entraîneront un bond de l'indice des prix à la consommation. Il souligne que la politique monétaire devra empêcher que cette hausse des prix à la consommation ne provoque une surenchère inflationniste des prix et des revenus, qui viserait à contrer l'érosion du pouvoir d'achat et ne pourrait qu'échouer à cet égard.

En ce qui concerne les opérations de gestion des réserves-encaisse effectuées par la Banque du Canada, le gouverneur déclare que celles-ci ont eu un caractère généralement restrictif, la Banque cherchant à contenir les effets des fortes pressions à la baisse sur les taux d'intérêt à court terme engendrées par les attentes du marché. Le taux des prêts à vue a fluctué entre 13 3/4 et 14 % pendant la majeure partie du mois de juillet, puis pendant presque tout le mois d'août, ce qui a contraint les agents agréés

Commenting on the Bank of Canada's cash management operations, the Governor said that in order to moderate the impact of strong downward pressure on short-term interest rates generated by market expectations, cash reserve settings had been generally restrictive. The call loan rate was held in a range of 13 3/4 - 14 per cent for much of July, and again for much of August, causing money market dealers to draw heavily on their ordinary Purchase and Resale Agreement lines with the Bank of Canada. This resistance was reinforced by open market operations, with frequent sales of treasury bills through the period. However, in the two weeks prior to the Board meeting the call loan rate eased to around 13 per cent. Special Purchase and Resale Agreements were extended on four occasions in July to counter unwarranted tightness in the overnight money market, while Sale and Repurchase Agreements were offered on two occasions in July to counter an unwarranted easing.

The Governor said that the Bank had made a total of 100 advances to members of the Canadian Payments Association over the 50 business days since the last Board meeting in late June, including 31 to major banks.

The Directors then reported on economic developments in their respective regions.

## STAFF TALKING NOTES ECONOMIC AND FINANCIAL DEVELOPMENTS

### RECENT ECONOMIC DEVELOPMENTS

#### Summary

- Economic growth remains vigorous in the major overseas economies. Taken as a group, they are experiencing rising inflationary pressures – a phenomenon particularly evident in Germany.
- External imbalances have improved recently, with the reduction in the trade surpluses of Japan and Germany being reflected in a decline in the U.S. trade deficit.
- Spurred on by sharp increases in crude oil prices, commodity prices have risen appreciably since the beginning of August.
- Growth in demand and output has continued at a very

du marché monétaire à puiser largement dans les facilités de crédit que la Banque du Canada leur octroie sous forme de prises en pension ordinaires. La résistance opposée à la baisse des taux d'intérêt a été renforcée par des opérations d'open market, c'est-à-dire par de fréquentes ventes de bons du Trésor durant la période. Cependant, au cours des deux semaines qui ont précédé la réunion du Conseil, le taux des prêts à vue a fléchi pour s'inscrire à environ 13 %. En juillet, la Banque a conclu des prises en pension spéciales à quatre reprises afin de contrer un resserrement injustifié sur le marché de l'argent à un jour et des cessions en pension à deux reprises pour parer à une détente injustifiée.

Le gouverneur signale qu'au cours des 50 jours ouvrables qui se sont écoulés depuis la dernière réunion du Conseil, tenue à la fin juin, la Banque du Canada a consenti en tout 100 avances aux membres de l'Association canadienne des paiements, dont 31 à de grandes banques.

Les administrateurs commentent ensuite la situation économique de leurs régions respectives.

## EXPOSÉS ORAUX DES MEMBRES DU PERSONNEL L'ÉVOLUTION DE LA SITUATION ÉCONOMIQUE ET FINANCIÈRE

### L'ÉVOLUTION RÉCENTE DE LA SITUATION ÉCONOMIQUE

#### Sommaire

- L'expansion économique reste vigoureuse dans les principales économies d'outre-mer. Les pressions inflationnistes s'accroissent dans ces économies prises comme un ensemble, bien que le phénomène soit surtout sensible en Allemagne.
- Les déséquilibres des comptes extérieurs se sont atténués récemment, la réduction des surplus du Japon et de l'Allemagne s'étant reflétée dans une diminution du déficit américain.
- Les cours des produits de base ont été clairement en hausse depuis le début d'août, sous l'impulsion de la brusque augmentation du prix du pétrole brut.
- La croissance de la demande et de la production continue d'être très modérée aux États-Unis. Cependant, les tendances inflationnistes se sont intensifiées récemment

moderate pace in the United States. However, inflationary pressures in the U.S. economy have intensified recently, reflecting the effects of mounting demand pressures on output capacity.

- Canada recorded a decline in GDP during the second quarter. The foreign sector was the only major component to diverge from this trend.
- The principal price indices indicate some recent progress on the inflation front, but these results predate August's oil price rise.

### Developments in the major overseas industrial economies

According to currently available data, economic expansion in the major overseas industrial economies as a whole should maintain its current pace. Growth in the first quarter of 1990 was particularly strong in Germany and Japan, and the recent oil price increases are not expected to slow expansion significantly before 1991. Moreover, since events continue to be influenced by a number of expansionary factors, notably German reunification, economic growth should remain vigorous through the second half of the year.

Inflationary pressures are on the rise in the five overseas countries, taken as a whole. On a national basis, however, the situation varies. For example, the increase in the consumer price index has been slowing in Japan since early 1990, and the situation in France is similar. Elsewhere, however, inflationary pressures remain strong (United Kingdom and Italy) or have even intensified (Germany). In addition, favourable developments in import prices have moderated increases in the various national consumer price indices. These indices will soon feel the effects of the recent oil price increases, however, so that conditions will probably become less favourable before too long.

Compared with the first quarter of 1990, external imbalances have recently shown some improvement. This correction was particularly evident in Japan and Germany and was reflected in a decline in the U.S. trade deficit, which in June of this year reached its lowest level since June 1983.

dans l'économie américaine, sous l'effet de l'accumulation des pressions de la demande sur la capacité de production.

- Le Canada a enregistré un recul du P.I.B. au cours du deuxième trimestre. Parmi les principales composantes, seul le secteur extérieur a fait voir une évolution divergente.
- Les principaux indices de prix font état de quelques progrès récents sur le front de l'inflation, mais ces résultats précèdent la hausse du prix du pétrole survenue au mois d'août.

### La conjoncture économique dans les principaux pays industriels d'outre-mer

Les données disponibles à ce jour nous permettent d'entrevoir la poursuite de l'expansion économique dans les principaux pays industriels d'outre-mer. Au premier trimestre de 1990, la croissance a été particulièrement forte en Allemagne et au Japon, et on ne s'attend pas à ce que la hausse récente du prix du pétrole ralentisse sensiblement l'expansion avant 1991. Comme par ailleurs certains facteurs expansionnistes, notamment l'unification allemande, continueront de faire sentir leurs effets, l'expansion économique devrait rester vigoureuse au cours du second semestre de l'année.

Les pressions inflationnistes s'accroissent dans l'ensemble des cinq pays d'outre-mer. Toutefois, les conditions nationales ne sont pas partout les mêmes à cet égard. Ainsi, la hausse de l'indice des prix à la consommation a ralenti au Japon depuis le début de l'année 1990, et la France connaît des conditions semblables. Mais ailleurs les pressions inflationnistes restent fortes (Royaume-Uni et Italie) ou s'intensifient (Allemagne). De plus, l'évolution favorable des prix des importations a eu pour conséquence de modérer la hausse des divers indices de prix à la consommation nationaux. Cependant, ces indices seront bientôt touchés par la récente augmentation du prix du pétrole, de sorte que les conditions pourraient être moins favorables d'ici peu.

Récemment, on a aussi assisté à une atténuation des déséquilibres des comptes extérieurs, par comparaison avec le premier trimestre de 1990. Cette correction a été particulièrement sensible au Japon et en Allemagne et elle s'est reflétée dans l'atténuation du déficit commercial des États-Unis qui a atteint au mois de juin dernier son niveau le plus faible depuis juin 1983.

## Developments in commodity markets

Expressed in U.S. dollars, commodity prices increased more than 6 per cent in the four weeks preceding 29 August. The primary reason for this increase was a 26 per cent jump in the index's energy component. In particular, the price of crude oil (West Texas Intermediate) has risen an average of 40 per cent since Iraq invaded Kuwait on 2 August. However, following an agreement among OPEC member nations to increase oil production above their respective quotas in order to maintain supplies during the Middle East crisis, the price of oil fell to U.S.\$25.90 a barrel on 29 August, after peaking at almost U.S.\$32.00 a few days earlier.

Excluding energy, commodity prices rose 0.7 per cent in the four weeks ending 29 August, as broad-based increases in metals prices (with nickel and gold leading the way) more than offset falling prices for farm products.

## Economic developments in the United States

### *Demand*

Consumer spending continues to grow in real terms, primarily as a result of strong motor vehicle and furniture sales. Nevertheless, the average pace of consumer spending growth since the beginning of the year lags well behind that in 1989.

In June and July, new car sales (domestic and imports) reached 9.8 million units at an annual rate. This is just slightly higher than the average sales level since the beginning of 1990 and a little below the annual rate for 1989. Housing starts declined for the sixth straight month in July to 1.148 million units at an annual rate – the lowest level since the 1981-82 recession.

As indicated by sluggish new orders for non-military capital goods in the last few quarters, investment is not especially strong. However, unfilled orders for aircraft and parts remain quite high.

While demand is growing only very moderately in the United States, there is no sign of unintentional inventory buildup. This reduces the risk of a decline in output later this year.

## L'évolution des marchés des produits de base

Exprimés en dollars des États-Unis, les prix des produits de base ont augmenté de plus de 6 % au cours des quatre semaines précédant le 29 août. Cette hausse s'explique d'abord et avant tout par un bond de 26 % dans la composante énergétique de l'indice. En particulier, le prix du pétrole brut (*West Texas Intermediate*) a augmenté en moyenne de 40 % depuis l'invasion du Koweït par l'Irak le 2 août dernier. Toutefois, par suite de l'entente survenue entre les pays membres de l'O.P.E.P., en vertu de laquelle ceux-ci pourront accroître la production au-dessus de leurs quotas respectifs de façon à maintenir les approvisionnements durant la crise du Moyen-Orient, le prix du baril de pétrole a chuté à 25,90 dollars (É.-U.) le 29 août, après avoir atteint un maximum de près de 32 dollars quelques jours auparavant.

Abstraction faite de l'énergie, les cours des produits de base sont en hausse de 0,7 % durant les quatre semaines se terminant le 29 août, des hausses assez généralisées du prix des métaux (quoique davantage accentuées pour le nickel et l'or) ayant plus que compensé la baisse des prix des denrées agricoles.

## L'évolution économique aux États-Unis

### *La demande*

En termes réels, les dépenses de consommation continuent de progresser sous l'impulsion surtout des ventes de véhicules automobiles et de meubles. Cependant, depuis le début de l'année le rythme moyen de croissance des dépenses de consommation se situe bien en deçà de celui de 1989.

Les ventes de voitures neuves (américaines et importées) ont atteint, en juin et juillet, un rythme annuel de 9,8 millions d'unités. C'est un peu plus que le niveau moyen des ventes depuis le début de 1990 et un peu moins que celui de 1989. Quant aux mises en chantier, elles ont diminué pour un sixième mois d'affilée en juillet pour s'établir au niveau de 1 148 000 unités en chiffres annuels, soit le plus bas niveau depuis la récession de 1981-1982.

L'investissement n'est pas très vigoureux, comme en témoigne la stagnation des nouvelles commandes de biens d'équipement civils depuis plusieurs trimestres. Toutefois, l'industrie aéronautique continue d'avoir un carnet de commandes bien rempli.

Si la croissance de la demande est très modérée aux États-Unis, il n'y a pas de signe d'une accumulation involontaire de stocks, ce qui réduit le risque d'une contraction de la production d'ici la fin de l'année.

### *Output and employment*

According to the most recent national accounts estimates, real GNP increased by 1.2 per cent during the second quarter (annual rate) – the same pace indicated by the preliminary estimates. However, the composition of this growth is somewhat different than reported in the earlier release, with a weaker increase in non-farm inventories and a better performance from net exports and personal consumption.

The industrial production index remained unchanged in July, with a decline in motor vehicle production negating some significant gains in the metals sector. Production was down in the automotive industry, in spite of the fact that inventories remained extremely low, sales were stable, and a fall strike threatened.

July also saw a decline in employment that pushed the unemployment rate up to 5.5 per cent. This marked the first time since early 1989 that the unemployment rate strayed significantly from its average of 5.3 per cent. In August, unemployment rose again, to 5.6 per cent. Employment in the manufacturing sector declined by 1.7 per cent from its most recent peak in March 1989, while employment growth in services (excluding government) has slowed sharply since April 1990.

### *Prices and costs*

In July, the 12-month rise in the consumer price index stood at 4.8 per cent, a slight increase over the June figure. Excluding food and energy, the rise is even more evident, as the index posted a 5 per cent year-over-year increase in July. While increases were seen in most components of the consumer price index (food and energy excluded), clothing, housing and medical services were primarily responsible.

The employment cost index indicates that compensation in the non-farm business sector rose 5.2 per cent in June on a year-over-year basis, the same rate as in March. With sustained labour cost increases and low productivity, there is little reason to hope for improvement in underlying inflation in the short term.

### *La production et l'emploi*

Selon les plus récentes estimations des comptes nationaux, le P.N.B. réel a augmenté de 1,2 % au cours du deuxième trimestre (à taux annuel), c'est-à-dire au même rythme que celui dont faisaient état les estimations préliminaires. La composition de cette croissance n'est cependant pas tout à fait la même que celle qui avait été précédemment annoncée : augmentation moins forte des stocks non agricoles; meilleure tenue des exportations nettes et des dépenses de consommation des ménages.

L'indice de la production industrielle est demeuré inchangé en juillet, un recul de la production de véhicules automobiles ayant annulé le gain important enregistré dans l'industrie des métaux. Ce recul de la production dans l'industrie automobile s'est produit à un moment où le niveau des stocks était très bas, où les ventes se maintenaient et où la menace d'une grève à l'automne pointait à l'horizon.

En juillet, on a aussi enregistré un recul de l'emploi qui a fait grimper le taux de chômage à 5,5 %. C'était la première fois depuis le début de 1989 que le taux de chômage s'écartait pour la peine d'une moyenne de 5,3 %. En août, nouvelle hausse du taux à 5,6 %. L'emploi manufacturier a reculé de 1,7 % depuis son dernier sommet de mars 1989, pendant que la croissance de l'emploi dans les services privés laisse voir un ralentissement marqué depuis avril 1990.

### *Les prix et les coûts*

Le taux de croissance de l'indice des prix à la consommation sur les douze derniers mois s'est établi en juillet à 4,8 %, en légère hausse par rapport à juin. Abstraction faite des aliments et de l'énergie, la hausse est encore plus visible, l'indice ainsi obtenu ayant atteint 5 % en juillet. Toutes les composantes de cet indice ont participé à ces hausses, mais ce sont les vêtements, le logement et les services médicaux qui en sont les principaux responsables.

L'indice du coût de l'emploi montre que la rémunération des employés du secteur privé non agricole a progressé de 5,2 % en juin par rapport aux douze derniers mois. Il s'agissait là du même taux qu'en mars. La progression soutenue des coûts du travail et la faible productivité ne laissent pas entrevoir, à brève échéance, une modération de la tendance sous-jacente de l'inflation.

## Economic developments in Canada

### *Demand*

According to the preliminary estimates of the national accounts for the second quarter of 1990, the gross domestic product fell by 1.6 per cent (annual rate), as all components of domestic demand showed signs of weakness. Consumer spending declined under the influence of sharp reductions in expenditures on automobiles and other durable goods. Much of the weakness in consumption may be attributed to a drop in personal disposable income during the quarter, which resulted from a sharp increase in direct tax payments.

Investment also fell sharply, as indicated by the steep decline in spending on machinery and equipment. The mid-year survey on investment intentions had given no warning of a change of this magnitude. Demand from the government sector also slipped during the second quarter.

In fact, only the foreign sector showed signs of vigour, partially offsetting the weakness in domestic demand. Exports grew at an annual rate of 21 per cent in volume terms, while imports grew just under 8 per cent. As a result, the trade deficit fell by \$4.5 billion. There has also been a significant decrease in inventories in the manufacturing and wholesale trade sectors.

### *Output and employment*

Gross domestic product at factor cost also declined in the second quarter – by about the same amount that it had increased in the first quarter. Goods production posted a considerable recovery, however, led by strong activity in the automotive and steel industries (possibly in anticipation of future strikes). The production of services declined during the same period, continuing the slowdown that had begun in the first quarter.

After moderate growth of 0.8 per cent (annual rate) in the second quarter, employment growth slowed still further in July, increasing by only 0.1 per cent. The weakness in employment was particularly noticeable in Ontario. In August, employment actually declined in Canada. After posting an average rate of 7.4 per cent in the second quarter, the unemployment rate climbed to 7.8 per cent in July; the trend continued in August, as the unemployment rate reached 8.3 per cent.

## L'évolution économique au Canada

### *La demande*

Selon les premières estimations des comptes nationaux, le produit intérieur brut a baissé de 1,6 % à taux annuel au cours du deuxième trimestre de 1990. Toutes les composantes de la demande intérieure ont montré des signes de faiblesse. Les dépenses de consommation ont baissé sous l'impulsion de fortes réductions des dépenses consacrées à l'automobile et à d'autres biens durables. Cette faiblesse de la consommation s'explique en bonne partie par une chute enregistrée au cours du trimestre par le revenu personnel disponible, sous l'effet d'une forte augmentation des versements d'impôts directs.

L'investissement a aussi chuté brusquement, comme en témoigne la forte baisse des dépenses en machinerie et équipement. L'enquête de la mi-année sur les intentions d'investissement ne laissait pourtant entrevoir aucun mouvement de cette ampleur. La demande en provenance du secteur public a également reculé au cours du deuxième trimestre.

En réalité, seul le secteur extérieur a fait preuve d'une vigueur telle qu'elle est venue compenser en partie la faiblesse de la demande intérieure. Les exportations en volume se sont accrues au cours du deuxième trimestre au rythme annuel de 21 %, alors que les importations s'accroissaient d'un peu moins de 8 %; ainsi, le déficit de la balance commerciale a été réduit de 4,5 milliards de dollars. On a aussi assisté à une réduction sensible des stocks dans l'industrie manufacturière et le commerce de gros.

### *La production et l'emploi*

Le produit intérieur brut au coût des facteurs a aussi décliné au deuxième trimestre à peu près autant qu'il avait augmenté au premier. Cependant, la production de biens a rebondi sous l'effet de l'activité dans les industries de l'automobile et de l'acier (peut-être en prévision de grèves à venir). Au cours de la même période, la production de services a baissé, prolongeant ainsi le ralentissement amorcé au premier trimestre.

La croissance de l'emploi a encore ralenti en juillet; la hausse n'a alors été que de 0,1 %, venant à la suite d'une croissance modérée de 0,8 % à taux annuel au deuxième trimestre. La faiblesse de l'emploi a été particulièrement visible en Ontario. En août, c'est à une baisse de l'emploi que l'on a assisté au Canada. Le taux de chômage s'est établi à 7,8 % en juillet après avoir été en moyenne de 7,4 % au deuxième trimestre; la tendance s'est poursuivie au mois d'août, où le taux de chômage a atteint 8,3 %.

### *Prices and costs*

As measured by the consumer price index, the inflation picture improved slightly in July (4.2 per cent on a year-over-year basis versus 4.3 per cent in June). Excluding food and energy, the rate stood at 4.0 per cent in July, its lowest level since May 1985. However, the GDP deflator did deteriorate slightly relative to the first quarter. It goes without saying, however, that August's increase in crude oil prices will likely lead to poorer results over the next few quarters. Both import and export prices fell in the second quarter; since the former fell more than the latter, the end result was a slight improvement in Canada's terms of trade.

Wage increases under the major wage settlements increased, on the average, by 6.2 per cent in the first quarter and by 5.5 per cent in the second. However, these results do not take into account changes in the regional distribution of these settlements from one quarter to another. According to the latest available data (May), average weekly earnings increased by 5.3 per cent on a year-over-year basis.

## RECENT FINANCIAL DEVELOPMENTS

### **Summary of developments since the previous meeting**

- The U.S. dollar has depreciated by 6.8 per cent against the major overseas currencies since the end of June, reflecting, in part, slower economic growth in the United States and expectations that an easing in U.S. monetary policy would follow. The abrupt increase in oil prices brought about by Iraq's invasion of Kuwait reinforced this tendency. It also led to a fairly broad-based increase in long-term interest rates in the major industrialized countries.
- While short-term interest rates have remained fairly stable in Europe, they rose by approximately 0.8 percentage points in Japan and declined by 0.3 of a percentage point in the United States.
- In Canada, short-term interest rates have fallen by 1.0 percentage point since the end of June, prompting a reduction in administered rates, including the chartered banks' prime rate. In contrast, long-term rates have risen slightly.
- The Canadian dollar has fluctuated widely in response to the fast-changing developments in oil prices. It rose to 88.59 cents (U.S.) on 23 August, its highest level in the last

### *Les prix et les coûts*

Mesurée par l'indice des prix à la consommation, l'inflation a légèrement reculé en juillet (4,2 % au cours des douze derniers mois contre 4,3 % en juin). En excluant les aliments et l'énergie, on observe que le taux s'est établi à 4,0 % en juillet, soit son niveau le plus bas depuis mai 1985. Cependant, le dégonfleur implicite du P.I.B. a montré une certaine détérioration par rapport au premier trimestre. Il va sans dire cependant que la hausse du prix du pétrole brut au mois d'août pourrait conduire à de moins bons résultats au cours des trimestres à venir. Les prix à l'importation et à l'exportation ont baissé au deuxième trimestre; les premiers ayant baissé davantage que les seconds, le Canada a enregistré une légère amélioration de ses termes de l'échange.

Les augmentations de salaires consenties dans le cadre des grands accords salariaux sont passées en moyenne de 6,2 % au premier trimestre à 5,5 % au deuxième. Toutefois, ces résultats ne tiennent pas compte des changements dans la répartition régionale de ces accords d'un trimestre à l'autre. La hausse des gains hebdomadaires moyens sur une période de douze mois était de 5,3 % selon les dernières données disponibles (mai).

## L'ÉVOLUTION RÉCENTE DE LA SITUATION FINANCIÈRE

### **Aperçu de l'évolution survenue depuis la dernière réunion**

- Depuis la fin de juin, le dollar É.-U. s'est déprécié de 6,8 % par rapport aux grandes monnaies d'outre-mer, reflétant en partie le ralentissement de la croissance économique aux États-Unis et les attentes conséquentes d'un assouplissement de la politique monétaire américaine. La flambée des cours pétroliers provoquée par l'invasion du Koweït par l'Irak a renforcé cette tendance. Elle a également entraîné une augmentation assez généralisée des taux d'intérêt à long terme dans les grands pays industrialisés.
- Les taux d'intérêt à court terme sont restés assez stables en Europe, mais ils ont grimpé d'environ 0,8 point de pourcentage au Japon et reculé de 0,3 point aux États-Unis.
- Au Canada, les taux d'intérêt à court terme ont baissé de 1,0 point de pourcentage depuis la fin de juin, provoquant une baisse des taux administrés, dont le taux de base des banques à charte, tandis que les taux à long terme ont légèrement augmenté.
- Le dollar canadien a fait l'objet de fluctuations prononcées, au gré de l'évolution volatile de la conjoncture pétrolière. Il a été porté à 0,8859 \$ É.-U. le 23 août, son niveau le plus élevé des douze dernières années, avant de redescendre précipitamment à 0,8612 le 4 septembre (0,8641 le 6 septembre). Le gain net par rapport

twelve years, then dropped back quickly to 86.12 cents (U.S.) on 4 September (86.41 on 6 September). The net gain relative to 26 June is 1.4 per cent against the U.S. dollar but zero against a weighted average of the major currencies.

- While growth in the broader monetary aggregates recovered slightly from the second quarter, it remains in line with the moderate trend observed since the beginning of the year. The growth rate of mortgage lending by banks, on the other hand, has declined sharply.

### Overseas financial developments

In Japan, where economic growth has been robust, short-term interest rates resumed their upward trend and the central bank raised its discount rate by 3/4 of a point to 6 per cent, whereas in Europe short-term rates remained fairly stable. However, Iraq's invasion of Kuwait in early August led to a strong increase in oil prices and a concomitant rise in long-term interest rates in most of the industrialized countries.

In the United States, short-term rates have fallen by about 30 basis points since the end of the second quarter. This decline was engineered by a 25-point cut in the federal funds rate, described by the chairman of the U.S. Federal Reserve as a counterweight to the unwelcome effects that the recent tightening of credit conditions by banking institutions was beginning to have on total spending. Such tightening resulted in part from the serious problems in the savings and loan industry, as well as from higher capital standards and the banks' desire to strengthen their financial positions in light of the economic slowdown. The steep decline in the growth of the monetary aggregates M2 and M3 and of credit aggregates in the second quarter was cited in support of this move. The growth of monetary aggregates recovered significantly in August.

Because of the worsening inflation picture (as indicated, for example, by the June CPI figures), the decline in U.S. short-term interest rates did not extend to long-term rates. Yields on long-term U.S. government bonds remained stable until the Middle East flare-up. Since then they have risen by approximately one-half of a percentage point, reflecting the expected inflationary consequences of higher energy prices.

Given the implications for interest rate developments of the

à sa valeur du 26 juin est de 1,4 % vis-à-vis de la devise américaine, mais nul en termes d'une moyenne pondérée des grandes monnaies.

- Le rythme de progression des agrégats monétaires au sens large a affiché une certaine reprise par rapport au deuxième trimestre, mais il s'inscrit dans la tendance modérée que l'on observe depuis le début de l'année. Le taux de croissance du crédit hypothécaire des banques a toutefois fortement fléchi.

### L'évolution financière à l'étranger

Au Japon, où la croissance économique demeure robuste, les taux d'intérêt à court terme ont repris leur mouvement à la hausse, et la banque centrale a relevé son taux d'escompte de 3/4 point pour le porter à 6 %, alors qu'en Europe les taux à court terme sont restés assez stables. Toutefois, l'invasion du Koweït par l'Irak au début du mois d'août a provoqué une forte majoration du prix du pétrole et une augmentation concomitante des taux d'intérêt à long terme dans la plupart des grands pays industrialisés.

Aux États-Unis, les taux à court terme ont baissé d'environ 30 points de base depuis la fin du deuxième trimestre. Cette baisse a été orchestrée par une diminution de 25 points de base du taux des fonds fédéraux, décrite par le président du Système de la Réserve fédérale comme un contrepoids à l'effet inopportunistement restrictif sur la demande globale d'un resserrement récent des conditions du crédit de la part des institutions bancaires. Ce resserrement viendrait en partie de l'ampleur des difficultés financières des institutions d'épargne, de même que d'un accroissement des normes de fonds propres et d'un désir des banques d'assainir leur situation financière dans le contexte d'un ralentissement de la croissance économique. Le fléchissement marqué de la croissance des agrégats monétaires M2 et M3 et des agrégats de crédit au deuxième trimestre a été évoqué pour appuyer cette décision. La progression des agrégats monétaires s'est redressée sensiblement pendant le mois d'août.

La diminution des taux d'intérêt à court terme aux États-Unis ne s'est pas propagée aux taux à long terme, étant donné la détérioration des perspectives inflationnistes, telle que révélée par exemple par la parution des chiffres de l'I.P.C. de juin. Le taux de rendement des obligations à long terme du gouvernement américain est donc resté stable jusqu'au moment de l'éclatement de la crise du Moyen-Orient; depuis, il a grimpé d'environ 1/2 point de pourcentage, reflétant les répercussions inflationnistes attendues de la hausse des prix de l'énergie.

Confronté aux perspectives que semblent impliquer pour les taux d'intérêt le ralentissement manifeste de la croissance économique aux États-Unis et la vigueur continue des économies d'outre-mer, le dollar É.-U. s'est déprécié de 6,8 % par rapport

evident slowdown in the U.S. economy and the continuing vigour of the overseas economies, the U.S. dollar depreciated by 6.8 per cent against the major overseas currencies since June; as of 6 September, it was trading at 1.5570 German marks and 141.15 yen. The U.S. dollar's depreciation against European currencies was exacerbated by the oil price surge, which has weakened further the growth prospects of the U.S. economy and has added to inflationary pressures worldwide. Higher oil prices had a more direct and positive impact on the pound sterling, given Great Britain's position as an oil exporter. The fall-back of oil prices following the agreement among OPEC nations to maintain supplies during the Persian Gulf crisis triggered a correction in foreign exchange rates in late August. The fallout from German reunification also served to bolster the mark.

Finally, the Middle East crisis has also affected stock prices, which since early August have fallen by about 20 per cent in Frankfurt and Tokyo and by 10 per cent in New York. The decline was much less severe in London and Toronto.

### Canadian financial developments

In Canada, financial aggregates continue to follow a moderate growth path. In the first two months of the third quarter, the growth rate of M2 averaged 6 per cent and that of M1, -7 per cent. For M2, this performance represents some recovery from the very slow growth recorded since March. For M1, it means the continuation of a trend begun early in the year. The pattern of the monetary aggregates in these two months involved a sharp contraction in July and a rebound in August. The primary reason behind this pattern was a temporary surge in private sector float in July.

The growth rate of total household credit (including mortgage and personal loans) has eased considerably since the beginning of the year, falling from 16 per cent in the first quarter to 10 per cent in the second. This reduction stems from the sharp decline in the growth of consumer credit. According to chartered bank data (the only information currently available for July and August), there was a marked deceleration in the growth of mortgage credit in the third quarter (from 19 per cent in the

aux grandes monnaies d'outre-mer depuis le mois de juin, et il cotait 1,5570 mark allemand et 141,15 yens au 6 septembre. En compromettant davantage les perspectives de croissance aux États-Unis et en attisant les pressions inflationnistes mondiales, la flambée des cours pétroliers a accentué la dépréciation du dollar américain vis-à-vis des devises européennes. Le renchérissement du pétrole a aussi exercé un effet positif plus direct sur la livre sterling, étant donné le statut d'exportateur de pétrole de la Grande-Bretagne. Le recul des cours pétroliers par suite de l'entente entre les pays de l'O.P.E.P. quant au maintien des approvisionnements pendant la crise du Golfe persique a précipité une correction des cours des devises à la fin août. Le stimulus que représente l'unification allemande a aussi continué de contribuer à l'appréciation du mark.

Enfin, la crise du Moyen-Orient a également pesé sur les cours boursiers, qui ont perdu environ 20 % à Francfort et à Tokyo et 10 % à New York depuis le début du mois d'août. La diminution a été beaucoup moins prononcée à Londres ainsi qu'à Toronto.

### L'évolution financière au Canada

Au pays, la croissance des agrégats financiers demeure modérée. En moyenne, pour les deux premiers mois du troisième trimestre, le taux de croissance de M2 se chiffre à 6 %, et celui de M1 à -7 %. Dans le cas de M2, cela représente un certain redressement par rapport à la croissance anémique observée depuis le mois de mars. Dans le cas de M1, cela maintient la tendance affichée depuis le début de l'année. Le profil d'évolution des agrégats monétaires au cours de ces deux mois affiche une contraction prononcée en juillet, suivie d'un rebondissement au mois d'août. Ce profil est pour l'essentiel attribuable à une augmentation temporaire des effets du secteur privé en cours de compensation en juillet.

Le rythme de progression de l'ensemble des prêts hypothécaires et des prêts personnels aux ménages a fléchi considérablement depuis le début de l'année, passant de 16 % au premier trimestre à 10 % au deuxième. Ce fléchissement provient de la baisse précipitée de la croissance du crédit à la consommation. Les données des banques à charte – les seules disponibles pour les mois de juillet et août – montrent une forte décélération de la croissance des prêts hypothécaires au troisième trimestre (3 % en juillet et 6 % en août, contre 19 % au deuxième trimestre) faisant contrepoids à la progression renouvelée des prêts personnels.

La croissance des crédits aux entreprises se maintient autour de 8 % depuis le début

second quarter to 3 per cent in July and 6 per cent in August), which served to offset renewed growth in personal loans.

The growth of business credit has remained near 8 per cent since the beginning of the year, a more moderate pace than in the two previous years.

The Canadian dollar appreciated strongly in late June. It reached 88.59 cents (U.S.) on 23 August, its highest level in the last twelve years. The dollar's strength reflected the continued wide differential between U.S. and Canadian interest rates, as well as the improvement in our terms of trade as a result of higher oil prices. But the decline in oil prices in late August, coupled with a narrowing of interest rate differentials, caused the Canadian dollar to fall back sharply. It traded at 86.41 cents (U.S.) on 6 September. Measured against a weighted index of G-10 currencies, the Canadian dollar has returned to its level of 26 June.

Given the moderating pattern of Canada's economic growth, short-term interest rates have declined steadily since early July. The rate on three-month treasury bills, for instance, fell from 13.58 per cent at the tender on 28 June to 12.57 per cent at the 6 September tender. Rates on six-month and one-year bills, which are sensitive to market expectations about the future direction of rates, declined even more, from 13.52 to 12.19 per cent and from 13.23 to 11.91 per cent, respectively. In this context, overnight financing costs remained relatively high.

The decline in short-term rates spread to short- and medium-term bond yields and helped moderate the response of Canadian long-term bond rates to increases in U.S. rates. It also resulted in a narrowing of interest rate differentials between the two countries. The differential between three-month commercial paper rates narrowed from 5.31 on 26 June to 4.68 points by 6 September, while the spread between Canadian and U.S. long-term government bond yields narrowed to 1.75 percentage points by 6 September. The decline in market rates also prompted a 1/2 percentage point reduction in the chartered banks' prime rate, which now stands at 14 1/4 per cent, and led to an easing of mortgage rates. Rates for one- and three-year mortgages fell to 13.75 per cent, a reduction of 0.5 points, and five-year rates dropped to 13.5 per cent, a reduction of 0.75 points.

de l'année, ce qui représente une certaine modération par rapport aux deux années précédentes.

Le dollar canadien s'est fortement raffermi à la fin de juin. Il a atteint 0,8859 \$ É.-U. le 23 août, son niveau le plus élevé des douze dernières années. Cette appréciation du dollar reflète l'attrait que continue d'exercer sur les capitaux étrangers l'écart élevé entre les taux d'intérêt canadiens et américains, de même que l'amélioration de nos termes de l'échange à laquelle a donné lieu le renchérissement du pétrole. Le recul des cours pétroliers à la fin d'août, combiné au rétrécissement des écarts de taux d'intérêt, a provoqué une vive retraite du dollar canadien. Celui-ci cotait 0,8641 \$ É.-U. le 6 septembre. L'indice pondéré par rapport aux devises des pays du Groupe des dix est revenu à son niveau du 26 juin.

Étant donné la modération manifeste de l'activité économique au Canada, les taux d'intérêt à court terme ont diminué progressivement depuis le début de juillet. Ainsi, le taux des bons du Trésor à 3 mois est passé de 13,58 % à l'adjudication du 28 juin à 12,57 % à celle du 6 septembre. Les taux des bons à 6 mois et à un an, qui incorporent les attentes du marché au sujet de l'évolution prochaine des taux, ont diminué encore plus, passant respectivement de 13,52 % à 12,19 % et de 13,23 % à 11,91 %. Dans ce contexte, le coût du financement à un jour a été maintenu à un niveau relativement élevé.

La baisse des taux à court terme s'est propagée aux taux de rendement des obligations à court et à moyen terme et elle a permis d'atténuer la réaction des taux à long terme à la hausse des taux américains. Elle s'est ainsi soldée par un rétrécissement des écarts des taux d'intérêt entre les deux pays. L'écart entre les taux du papier commercial à trois mois est passé de 5,31 points le 26 juin à 4,68 points le 6 septembre, tandis que l'écart entre les taux des obligations à long terme des gouvernements canadien et américain est tombé à 1,75 point de pourcentage. La diminution des taux du marché a aussi provoqué une réduction de 1/2 point de pourcentage du taux de base des banques à charte, lequel s'établit présentement à 14 1/4 % et a entraîné la baisse des taux hypothécaires. Les taux à un an et à trois ans ont été abaissés à 13,75 %, une réduction de 0,5 point, et les taux à cinq ans ont été établis à 13,5 %, une réduction de 0,75 point.

# Record of press releases

*Major press statements issued by the Bank of Canada and selected other official releases of related interest are published below.*

*The following press release was issued on 15 November 1990 by the Bank for International Settlements. The Bank of Canada was a member of the Group of Ten countries involved in the preparation of the Report of the Committee on Interbank Netting Schemes of the Central Banks of the Group of Ten Countries (56 pages).*

*Copies of the report are available from Publications Distribution, Bank of Canada, 234 Wellington Street, Ottawa, Ontario, K1S 0G9.*

## BANK FOR INTERNATIONAL SETTLEMENTS

### **Press Communiqué issued by the Committee of Governors of the Group of Ten**

At their meetings on 10th September and 12th November the central bank governors of the Group of Ten countries discussed a report on cross-border and multi-currency netting schemes prepared for them by a Committee on Interbank Netting Schemes composed of senior officials from their central banks, under the chairmanship of the General Manager of the BIS. The Committee's report, which is being published today by the BIS, analyses further the policy implications of netting schemes identified as being of particular concern to central banks collectively in the Report on Netting Schemes prepared by the Group of Experts on Payment Systems and published in February 1989.

In considering the Committee's report, the Governors took as their starting point the shared policy interests of central banks in maintaining, and encouraging improvements in, the efficiency and stability of interbank payment systems. They are therefore agreed that cross-border and multi-currency netting schemes, because of their potential impact on interbank payment systems, need to be examined carefully. They are also agreed that such schemes have the potential, depending on the arrangements, to improve the efficiency and stability of those systems by reducing market

## BANQUE DES RÈGLEMENTS INTERNATIONAUX

### **Communiqué de presse des gouverneurs du Groupe des Dix**

Lors de leurs réunions des 10 septembre et 12 novembre, les gouverneurs des banques centrales des pays du Groupe des Dix ont examiné un rapport sur les systèmes de compensation transfrontières et multidevises préparé à leur intention par un Comité sur les systèmes de compensation interbancaires, constitué de hauts fonctionnaires de leurs banques centrales et présidé par le Directeur Général de la BRI. Le rapport du Comité, publié ce jour par la BRI, analyse de manière plus approfondie les implications des systèmes de compensation, au niveau de la politique économique, considérées comme présentant un intérêt particulier pour l'ensemble des banques centrales dans le Rapport sur les systèmes de compensation élaboré par le Groupe d'Experts sur les systèmes de paiement et publié en février 1989.

Dans le cadre de l'examen du rapport du Comité, les gouverneurs ont pris comme point de départ l'intérêt commun des banques centrales à préserver l'efficacité et la stabilité des systèmes de paiement interbancaires et à encourager toute amélioration à cet égard. Ils sont donc convenus que les dispositifs de compensation transfrontières et multidevises, en raison de leur incidence potentielle sur les systèmes de paiement interbancaires, doivent faire l'objet d'un examen attentif. Ils ont également reconnu que de tels dispositifs sont susceptibles, en fonction de leurs caractéristiques, d'améliorer l'efficacité et la stabilité de ces systèmes en réduisant les coûts de règlement des opérateurs du marché et leur exposition aux risques de crédit et de liquidité, sous réserve

participants' settlement costs and their credit and liquidity exposures, provided that certain conditions are met. With respect to these conditions the Governors have endorsed the minimum standards for the design and operation of cross-border and multi-currency netting and settlement schemes set out in Part C of the Committee's report.

The Governors have also agreed that there is a need for cooperative central bank oversight of netting systems that directly link the credit and liquidity exposures of banks in different countries similar to the oversight which they exercise with respect to domestic payment systems. They have therefore decided to adopt the principles for cooperative oversight of cross-border and multi-currency netting and settlement schemes set out in Part D of the report of the Committee on Interbank Netting Schemes and to invite other central banks to consider use of these principles as a framework for cooperation among central banks.

The Governors have also agreed to transmit the report to the Basle Committee on Banking Supervision and to recommend that G-10 supervisory authorities take into account, in the exercise of their responsibilities with respect to individual institutions, both the minimum standards for cross-border and multi-currency netting and settlement schemes and the principles for cooperative central bank oversight of such schemes mentioned above. In addition, the Governors have agreed to request the Basle Committee on Banking Supervision to give further consideration, in the light of the report, to the treatment of netting under the 1988 Basle Accord on International Convergence of Capital Measurement and Capital Standards for international banks.

Finally, the Governors have agreed to transmit the Report of the Committee on Interbank Netting Schemes to the Committee on Payment and Settlement Systems – which has been established as successor to the Group of Experts on Payment Systems – and to request the Committee to continue to review possible measures that central banks might take – either individually or on a cooperative basis – to improve efficiency and reduce risks in the settlement of cross-border and multi-currency transactions.

que certaines conditions soient satisfaites. S'agissant de ces conditions, les gouverneurs ont approuvé les normes minimales pour la conception et le fonctionnement des systèmes de compensation et de règlement transfrontières et multidevises énoncées dans la partie C du rapport du Comité.

Les gouverneurs ont également reconnu la nécessité d'un suivi concerté, par les banques centrales, des systèmes de compensation qui lient directement les risques de crédit et de liquidité encourus par les banques dans différents pays, semblable à celui qu'elles exercent à l'égard des systèmes de paiement nationaux. Ils ont donc décidé d'adopter les principes relatifs à l'exercice d'un suivi concerté des systèmes de compensation et de règlement transfrontières et multidevises énoncés dans la partie D du rapport du Comité sur les systèmes de compensation interbancaires et d'inviter les autres banques centrales à envisager l'utilisation de ces principes comme cadre de coopération entre banques centrales.

Les gouverneurs sont également convenus de transmettre le rapport au Comité de Bâle sur le contrôle bancaire et de recommander que, dans le cadre de leurs responsabilités vis-à-vis des divers établissements, les autorités de contrôle du Groupe des Dix tiennent compte à la fois des normes minimales pour les systèmes de compensation et de règlement transfrontières et multidevises et des principes relatifs à l'exercice, par les banques centrales, d'un suivi concerté de tels systèmes. Les gouverneurs sont convenus, en outre, d'inviter le Comité de Bâle sur le contrôle bancaire à reconsidérer, à la lumière du rapport, le traitement accordé à la compensation dans l'accord de Bâle de 1988 sur la convergence internationale de la mesure et des normes de fonds propres pour les banques internationales.

Enfin, les gouverneurs sont convenus de transmettre le rapport du Comité sur les systèmes de compensation interbancaires au Comité sur les systèmes de paiement et de règlement – institué pour succéder au Groupe d'Experts sur les systèmes de paiement – et de l'inviter à poursuivre son examen des mesures que les banques centrales pourraient adopter – soit sur un plan individuel, soit de manière concertée – pour améliorer l'efficacité et réduire les risques dans le règlement des opérations transfrontières et multidevises.
